AND I

-

MESSAGE FROM THE CHAIRMAN OF THE BOARD

The year 2022 was characterized by high global demand for salmon. The main markets of AquaChile -the United States, Brazil and Japan- reached prices that were higher than the average for the past few years. The pandemic strengthened home salmon consumption, and consumers were increasingly inclined to consume healthy and sustainable proteins.

Meanwhile, production costs continued to climb. The uncertainty generated by the war in Ukraine, the sustained increase in the prices of raw materials and inflation have driven costs higher than they were last year.

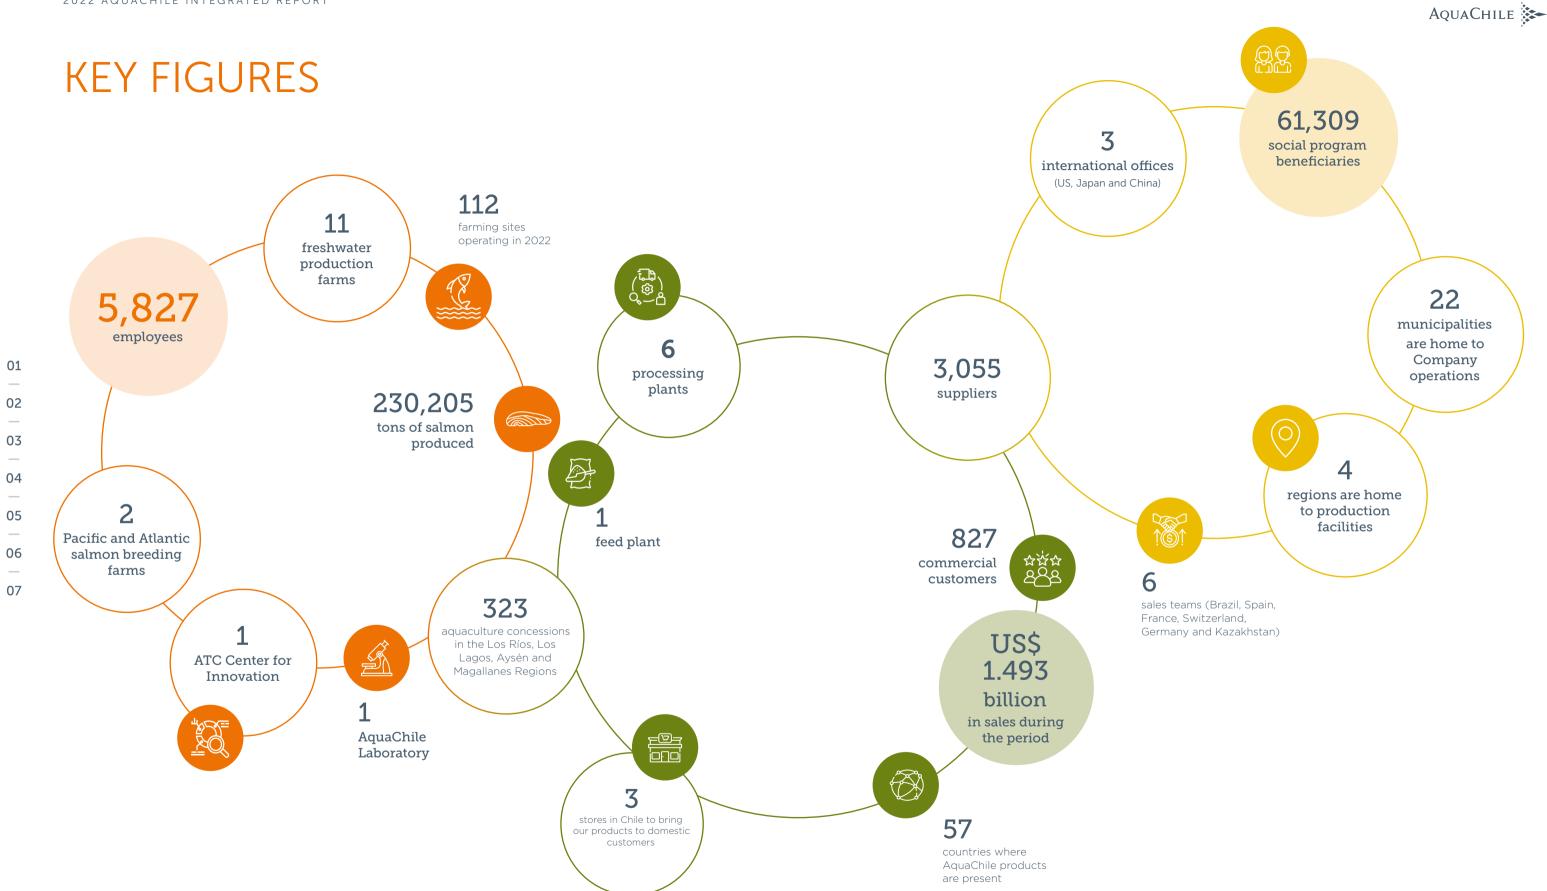

I invite you to read the 2022 Integrated Report so that you can In this context, in 2022, important progress was made in the recognize the enormous work of a human team that draws on area of development at AquaChile, and much of this is reflected passion and dedication to make one of the most sustainable in this sustainability report. Our priority in environmental care and healthiest proteins that our country produces. is leading us towards increasingly sustainable production with lower use of fresh water and pharmaceuticals, more efficient Warmly, production control systems and the development of science that allows us to learn more about the marine environment where we interact.

Along these lines, innovation, our neighboring communities and the commitment of our employees have been our allies. Today, AquaChile is active in 22 municipalities in Chile in four regions and has sales teams in nine countries. Communities in all of them give us the wealth of local knowledge and inspire us to grow and create progress and wellbeing. For their part, our workers are the heart of our company, and always receive the most recognition because of their work and dedication. They are an endless source of innovation, and as such we focus our work on caring for and protecting them.

> José Guzmán Vial Chairman of the Board

OUR HISTORY

In June 2018, the company Agrosuper announced that it would buy shares of the company Friosur's salmon area. In August of that same year, Agrosuper announced that it was buying Empresas Aquachile S.A., which had recently acquired Salmones Magallanes.

Once approvals were granted by the Financial Market Commission (CMF) and the National Economic Prosecutor's Office (FNE), the new AquaChile became a reality on April 1, 2019. It is comprised of Los Fiordos, Salmones Friosur, AquaChile and Salmones Magallanes.

OWNERSHIP STRUCTURE

The Company is controlled by Mr. Gonzalo Vial Vial, ID Number 3.806.024-4, and by his children, Ms. María Cristina Vial Concha, ID Number 7.032.945-K; Ms. María of the Pilar Vial Concha, ID Number 7.022.795-2; Ms. María José Vial Concha, ID Number 7.022.776-2; and Mr. Gonzalo Vial Concha, ID Number 7.022.663-4, through their indirect shares in the entity.

The aforementioned individuals participate in Agrosuper S.A., the controlling company of Empresas Aquachile S.A., through the following companies: Agrocomercial El Paso S.A., Promotora Doñihue Ltda., Agrícola GV S.A. and Inversiones VC Ltda. They are directly and indirectly holders of 100% of the shares and of the social rights of the aforementioned entities.

The controlling members do not have a joint action agreement. The Company has no significant ownership or control changes to report for this period.

The Company has two shareholders: Agrosuper S.A., Taxpayer ID: 76.129.263-3, which owns 99.9982713%, and Agrosuper SpA, Taxpayer ID: 76.126.154-1, which owns 0.0017286%. There are no joint action agreements involved.

value.

01

The success of this integration has allowed AquaChile to be the largest salmon producer in Chile and the second largest in the world.

The Company has no classes or series of shares. Its shares are ordinary, nominal and have no par

KEY FACTORS FROM THE EXTERNAL ENVIRONMENT FOR BUSINESS DEVELOPMENT

Weather and Environmental Conditions

The weather and water temperatures are key factors for healthy fish growth. Adequate environmental conditions are essential for water quality and preventing the spread of disease.

International Market

Chile's salmon industry is highly dependent on international markets, especially those of importer countries and continents like the United States, Japan and Europe.

These markets' demand for salmon is a critical factor that influences prices and the growth of the industry.

Government Regulations

Intense administrative regulation and periodic legislative changes directly affect salmon industry production, sales and costs.

International Competition

Countries like Norway, Canada and Scotland are important competitors in the global salmon market. International competition influences salmon production and pricing

Technology and Innovation

Salmon companies are investing in more advanced technologies in order to improve salmon production and quality.

LEGAL AND REGULATORY FRAMEWORK

We focus on producing and selling Atlantic and Pacific salmon. Salmon farming is a regulated activity in Chile. The General Law on Fishing and Aquaculture establishes authorization and concessions conditions, penalties and expiry. The other regulations that shape this industry are mainly laws related to the environment and water rights.

The domestic entities in the aquaculture sector with regulatory and oversight powers are the Undersecretary for Fisheries and Aquaculture, which issues regulations for salmon operations; the National Fisheries Service, which oversees activities and penalizes non-compliance; the Environmental Assessment Service, which issues environmental authorizations; the Environmental Superintendency, which oversees compliance with environmental regulations and issues penalties when appropriate; the Undersecretary for the Armed Forces, part of the National Defense Ministry, which grants aquaculture concessions and declares them expired when appropriate; and the General Water Directorate, which grants, regulates and oversees water use rights.

RELEVANT PATENTS

The relevant patents that we currently hold are commercial patents, aquaculture patents and patents linked to maritime concessions.

Commercial patents are assigned to every area in which we operate.

INVESTMENT PLAN

The Company has not approved the implementation of an investment plan. However, we assess new investments on an ongoing basis. Any such decisions are subject to approval based on their merit and the entity's financial capacity.

The Board of Directors has 10 members. Per the company's Statutes, directors may not be shareholders, may be reelected indefinitely, and are compensated for their work.

A completely new Board is seated every three years. This last occurred in 2020.

The entity has a regular monthly session which is held at the time and on the date set by the Board itself. During this meeting, its members receive information on updates on topics of interest.

For corporate governance practices, we adhere to General Regulation No. 461 of the Financial Market Commission.

Board and Committee Appointment and **Selection Processes**

The Board is appointed by the Shareholders' Meeting. The committees are appointed by the Board of Directors.

Board and Senior Executive Compensation Policies

The Company has a single set of policies and criteria that govern salary, compensation and allowance structure. They are based on objective criteria and mechanisms that differentiate levels of responsibility based on the impact of the role on the Company's business. Along these lines, there is no specific procedure for the CEO and senior executives. They are subject to the parameters set out in the overall policy.

02

03

04

05

06

07

Policy for Hiring Experts and Advisors (CMF 3.2.iii)

AquaChile does not use third parties as advisors on accounting, tax, financial, legal or other matters. The Board is, however, authorized to hire external advisors on any specific matter that it deems relevant or necessary in accordance with the Corporate Governance Practices. The reasons for advising service hires must be duly reflected in the minutes of the corresponding session. Where applicable, Board advisor selection process is conducted in an objective and transparent manner. Advisors' selection and approval are considered by the Board and reported to the Ordinary Shareholders' Meeting.

Performance Evaluation (CME 3 2 ix)

While the administration has not found it necessary to implement a formal procedure to assess the performance of its members and committees, during the sessions and when appropriate, information and updates on certain topics are presented that may allow them to continue to improve in addition to complying with the law and the Company's Code of Conduct.

Furthermore, the Board periodically receives a report prior to its sessions that contains human resources indicators. This includes the number of workers by gender, nationality, age range, years of service and salary gap. The purpose of this exercise is to identify and reduce organizational, social or cultural barriers that may inhibit the natural diversity of capacities of the company. Furthermore, workplace environment surveys are conducted to identify gaps regarding which working groups can be established.

The Board and its committees enjoy the ongoing support of internal and external communications advisors who, among other things, recommend improvements to the dissemination of information to the market and improvements in corporate governance.

New Member Orientation

(CMF 3.2.v)

The orientation process is led by the Chairman or, in their absence, by the Board Secretary. The process includes meetings with the Chairman, CEO, Finance and Administration Manager, and the company's auditor and attorney, who also serves as the Board Secretary.

Furthermore, based on the unique characteristics of our field, the process includes visits to various production facilities or sites, covering all of the stages involved in aquaculture.

Meetings with Strategic Management Units (Risk Management, Internal Auditing, and Social Responsibility Units) (CMF 3.2.vi; 3.2.vii)

The Board meets with the external auditing company during its sessions to review and approve the annual financial statements. It also meets with them through the Auditing Committee during its sessions to review the Uniform Coded Statistics Sheets (Ficha Estadística Codificada Uniforme, FECU). The CEO and Administration and Finance Manager participate in these meetings.

Periodicity of Regular Meetings and Site Visits (CMF 3.2.viii; 3.2.x; 3.2.xi) The Board meets once a month. Extraordinary meetings are held on an ad hoc basis, for example, to address and approve the FECUs. The Directors periodically conduct individual site visits to Company facilities. The Board has continued to operate during crises in accordance

The Board meets with risk management units quarterly through the Risk Committee. The CEO participates in these meetings. The Board meets with the external auditing firm responsible for auditing the financial statements twice a year without the presence of Company managers or senior executives. The main issues addressed during these meetings include: • The annual audit program or plan.

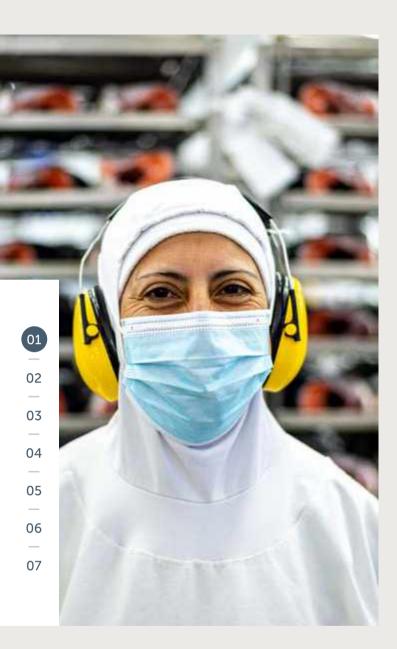

- Possible differences detected in the audit in regard to accounting practices, administrative systems and internal auditing

- Possible serious weaknesses that may have been detected and those irregular situations which must be reported to the competent regulatory agencies.
- The results of the annual audit program.
- Possible conflicts of interest that could exist in regard to the external auditing firm or its personnel due to the provision of other services to the Company or to companies belonging to the corporate group, and due to other situations.

with legal regulations and the guidelines of the Financial Market Commission (CMF) in regard to its operations, even if there is no specific policy regarding such matters.

Access to Information Systems (CMF 3.2.xii)

Directors have access to a restricted electronic mechanism that is used to adequately and safely store private documents and minutes so that they are available for each Board meeting. Board minutes are sent to each member prior to the meeting in which they will be submitted for their approval.

This electronic mechanism allows Directors to:

- Access all minutes and documents shown in every board meeting over the last three years safely, remotely and at any time.
- Safely and remotely access, and notwithstanding the legal obligations regarding summons filing deadlines and contents, the minutes and documents summarizing all the matters to be discussed in that meeting and every piece of information that presented at that meeting or additional information necessary to prepare for it.
- Safely and remotely access the Company's complaints channel at any time.
- Review draft minutes prior to the session in which they are to be approved.

Salary Gap

(CMF 3.2.xiii.f)

There are no differentiated forms of Board compensation, benefits, allowances or any other remuneration based on gender or any other element.

Board and Senior Executive's Percentage Shareholdings

| (CIVII J.T.IV) | CMF 3.4 | .iv |
|----------------|---------|-----|
|----------------|---------|-----|

| Senior executives and Directors | Percentage shareholdings in the ownership of the issuer |
|--------------------------------------|---|
| Director Gonzalo Vial Vial | 1.52% indirect shareholding |
| Director María José Vial Concha | 24.57% indirect shareholding |
| Director María del Pilar Vial Concha | 24.57% indirect shareholding |

Committees

(CMF 3.3) The Board has three committees:

Committee Meetings and Spending: The committee meets quarterly. It did not incur any expenses in 2022.

This body examines the internal auditing plan and reviews the company's financial statements.

Members: José Guzmán Vial, Canio Corbo Lioi, Fernando Barros Tocornal and Antonio Tuset Jorratt.

Guests: Sady Delgado Barrientos (CEO), Luis Felipe Fuenzalida Bascuñán (Agrosuper Corporate Finance and Administration Manager), Felipe Silva Rivera (Agrosuper Legal Manager), Álvaro Varela Walker (Legal Representative), the rest of the Directors, Óscar Durán Rabah (Agrosuper Corporate Manager of Auditing and Compliance) and Miguel Ángel Lavagnino Contreras (AquaChile Finance and Administration Manager) as guests and other executives depending on the topic.

Committee Meetings and Spending: The committee meets quarterly. It did not incur any expenses in 2022.

None of the Directors participating in the committees is or has been an independent Director. No Director receives income for their work on the respective committee. Article 50 bis of Law No. 18.046 does not apply to the committee because it does not meet the equity conditions set out in the law.

The body periodically studies the company's risk areas and internal oversight policies.

Members: José Guzmán Vial. Verónica Edwards Guzmán. Juan Claro González and

Guests: Sady Delgado Barrientos (CEO), Luis Felipe Fuenzalida Bascuñán (Agrosuper Corporate Finance and Administration Manager), Felipe Silva Rivera (Agrosuper Legal Manager), Álvaro Varela Walker (Legal Representative), the rest of the Directors, Óscar Durán Rabah (Agrosuper Corporate Manager of Auditing and Compliance) as a guest and other executives depending on the topic.

SENIOR EXECUTIVES

(CMF 3.4.i)

Compensation and Benefits for Senior Executives

(CMF 3.4.iii)

AquaChile does not have special compensation or benefits plans for its senior executives or plans that provide for payments based on stock options.

Compliance with National Codes (CMF 3.5)

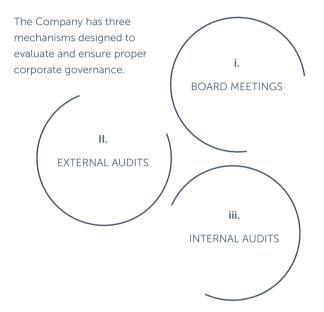

Our Board implements Corporate Governance practices based on updates and recommendations set forth in current regulations and legislation in the territories where it operates and the adoption of other policies and/or procedures that are applied in accordance with the regulator's recommendations. These practices have been updated and adjusted in accordance with new regulations (NCG 461) and best industry practices.

Governance Framework

In an effort to guarantee and evaluate the proper functioning of its corporate government, the CEO reports key business indicators to the Board on a monthly basis. The managers of each business also report monthly to an executive committee.

The divisions that report to the CEO are Production, Industrial, People, Sales, Administration and Finance, Communication, and Reputation and Communities.

In an effort to integrate a sustainability approach into our operations, key variables have been defined in each business unit. These are measured and reported out at Executive Committee and Board meetings on a monthly basis and include energy and fuel consumption, water consumption, waste management, legal compliance, risk matrix, and accident rates.

Learn more about our Corporate Governance Practices here.

At AquaChile, we promote behavior based on transparency and honesty in all of our activities.

In 2022, we strengthened and continued to implement the Crime Prevention Model and Free Competition Program. We focused on offering training to monitor and prevent the crimes identified in the regulations.

ETHICAL COMPLIANCE AND TRANSPARENCY

CRIME PREVENTION MODEL

Our Crime Prevention Model has been certified. It is a monitoring process that employs various oversight activities and covers the businesses or activities that are exposed to risks related to the crimes set out in Law 20.393, that is, asset laundering, terrorism financing, bribing a public official whether in Chile or abroad, receiving stolen goods, inappropriate business dealings, corruption among private entities, misappropriation, improper management, water pollution, illegal fishing, production and sale of prohibited, exhausted or overexploited hydrobiological resources, and other crimes that are incorporated into said legal body in the future. The Crime Prevention Officer is responsible for implementing and ensuring compliance with the Crime Prevention Model in cooperation with the Company's management.

No penalties or instances of non-compliance with Law 20.393

01

02

03

04

The model is comprised of various tools:

The main topics addressed were the role of the Integrity Committee, corporate values, the complaints channels and compliance programs.

- A total of 327 employees were trained, and 491 training hours were delivered.
- The Company trained 1,173 employees between 2020 and 2022.

BUSINESS CODE OF CONDUCT

We have a Business Code of Conduct that reinforces our ethical commitment. It is directed at everyone who works at or represents AquaChile. In our policy, we state that compliance with legislation and with the commitments that we have made voluntarily is fundamental.

This document constitutes our values framework as it relates to our actions, bringing together elements of current legislation and aspects related to our corporate integrity. This year, we declared our respect for ethical business practices and expected behavior.

The code, which is directed at everyone who works for or represents AquaChile, addresses issues such as employees' fundamental rights; protecting the life, safety and labor conditions of all workers; alcohol and drugs; non-discrimination; sexual or workplace harassment; conflicts of interest; personal use of internal resources; use of confidential information; and conduct vis-a-vis third parties and society as a whole.

Updating and Dissemination of AquaChile's New Business Code of Conduct

We updated the Business Code of Conduct this year and distributed it throughout the entire organization in both paper and digital formats.

Our values are based on four pillars:

PEOPLE

Those we work with and that we want to count on.

MANAGEMENT

The way we work.

IDEAS That guide business

decisions.

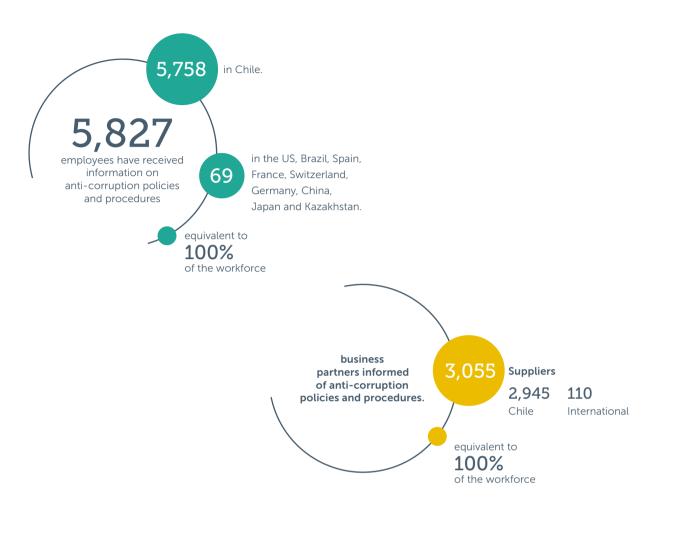

SUSTAINABILITY

Ongoing and responsible concern for and work in the various areas of our daily activities.

No complaints regarding drugs and alcohol, conflicts of interest, fraud, irregular hiring and tender practices, freedom of competition, the environment, human resources, human rights or theft were received during this period.

LEGAL AND REGULATORY COMPLIANCE

At AquaChile, we closely follow the national legislative agenda to stay abreast of new laws and changes to current ones.

We also engage in dissemination and training activities regarding the laws that regulate aquaculture activities and transmit the experience gained through management of complaints filed with Sernapesca regarding non-compliance with the appropriate teams.

During the reporting period, there have been no complaints or fines related to Law No. 19.496 on Protecting Consumer Rights or equivalent legislation in foreign jurisdictions.

Procedures designed to prevent and identify regulatory non-compliance related to workers' rights are set out in the Internal Regulations on Order, Hygiene and Safety. Legal proceedings regarding job stability were initiated in 2022 and the case ended through compromise.

No cases of significant non-compliance with laws and/or regulations on unfair competition, monopoly, or actions that go against free competition were recorded during the reporting period. No contributions were made to political parties and/or representatives.

Finally, three legal cases from previous years involving complaints of violations of the General Law on Fishing and Aquaculture were closed in 2022.

RISK MANAGEMENT

We have identified corporate risks, which are the general framework for the management and oversight of the Corporate Risk, Compliance, Internal Auditing and Regulations and Procedures Areas. Based on this, we define the risk matrix and testing controls along with the internal auditing plan for operational risks and a testing controls plan for risks related to Law 20.393 on Criminal Liability for Private Entities and Legal Decree 211 on Protecting Free Competition.

The main policies on this topic are set out in the Crime Prevention Policies and Procedures, the Free Competition Policies and Procedures and various procedures, regulations and instructions developed in the organization's various units.

Risk

Management

Areas

We analyze our operations on an ongoing basis in order to identify risks inherent to the business and implement mechanisms or procedures that allow us to address them, minimizing the negative effects that they could generate. In this context, we have identified risk factors inherent to the Company's activities and included in its risk management policy and are aware that others may be identified.

INFORMATION SECURITY RISKS

Our work in this area is based on risk management and compliance with international standards CIS18 and ISO27001.

Information Security Foci

| Cybersecurity | Information security |
|----------------|----------------------|
| User awareness | Industrial security |

01

CORPORATE RISKS

Conducts quarterly management of the main findings related to 23 strategic and reputationrelated risks monitored by the organization.

Generates a report for the Risks Committee.

COMPLIANCE

Conducts preventative management through trainings and investigative management using the testing controls plan.

Generates a report for the Risk Committee each semester

INTERNAL AUDIT

Engages in investigative management through monthly audits, evaluating the efficacy of the controls established in each unit.

Submits a report to the divisions and a report to the Audit Committee.

Cybersecurity Program

This program consists of projects designed to increase technical controls and processes in order to ensure the confidentiality, integrity and availability of systems and data. It is based on compliance with standard CIS18 on critical security controls. In 2022, we implemented a total of 15 projects and achieved 95% compliance with the program.

Cybersecurity Program

This program consists of projects designed to increase technical controls and processes in order to ensure the confidentiality, integrity and availability of systems and data. It is based on compliance with standard CIS18 (Center for Internet Security) on critical security controls. In 2022, we implemented a total of 15 projects and achieved 95% compliance with the program.

2022 Progress on information security and cybersecurity

95%

Cybersecurity projects Goal: 100%

90% Industrial security projects Goal: 100%

100% User awareness Goal: 100%

ISO 27.001 Certification

Project to certify system exploitation processes and information protections based on the information security and cybersecurity management standard. We achieved 30% progress on this project in 2022.

Information Security Cultural Shift Management Project

Activities, communications and training to raise awareness and change the Company's culture regarding information security. We used the ADKAR change management methodology, an individual change management model that identifies five phases for achieving change (awareness, desire, knowledge, ability and reinforcement). 100% implemented in 2022.

50

In 2022, we automated the request for the quarterly report on Corporate Risk for the Industrial, Production, Sales, Administration and Finance, People and Corporate Affairs Divisions. This allowed us to obtain 20 automated reports.

A LAND

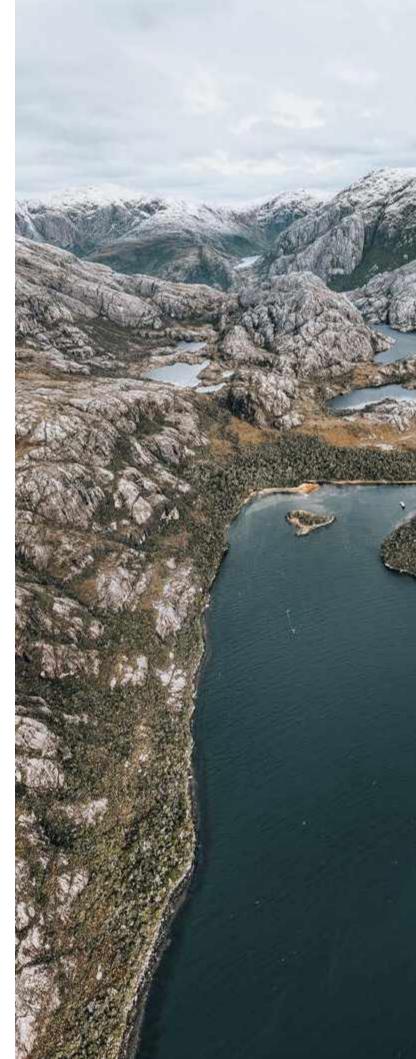

ECONOMIC PERFORMANCE AND FINANCIAL SOLVENCY

In 2022, demand for salmon returned to pre-pandemic levels and the global supply was restricted. This led to a 26.2% increase in income for our Company over 2021. As such, the net profits for our Company were 18.6% higher than the previous year.

ECONOMIC VALUE GENERATED AND DISTRIBUTED

| | 2022 (ThUS\$) | 2021 (ThUS\$) | CHANGE % |

OUR PATH TO **SUSTAINABILITY**

We know that care and respect for and conservation of the environment that surrounds us is fundamental to the success and sustainability of our work. To reinforce this commitment, we have adhered to nine of the Sustainable Development Goals (SDGs) proposed by the United Nations (UN).

In an effort to integrate a sustainability approach into our business, we have identified key variables that each business unit should measure and report monthly. These include energy and fuel consumption, water consumption, waste management, legal compliance, risk matrix and accident rate.

The Executive Committee and Board meet monthly, and the Board is informed of the efforts to manage the impacts of the business on the economy, environment and people.

2 ZERO HUNGER ****\\

Rebuilding Homes in Castro

We partnered with Desafío Levantemos Chile, the Los Lagos Regional Government, the Housing Ministry, the Salmon Council and SalmonChile to build houses following a fire in Castro. We paid for and built over 38 homes, benefiting 144 people.

5 Sustainability and integrated reports published since 2018.

SALMON'S ESG VALUE

The world's population is constantly growing, which poses the challenge of providing healthy food to over 9 billion people by 2050.

CARBON FOOTPRINT

Salmon has a smaller carbon footprint than other forms of animal protein. According to the Global Salmon Initiative (GSI), 0.6 k of carbon dioxide are produced for every 40 grams of edible salmon protein compared to 5.92 k in the case of beef.

WATER FOOTPRINT

The water footprint of salmon production is lower than that of other meats, requiring 11 times less water than beef.

CIRCULAR ECONOMY

68% of salmon is edible. The other 32% is used to make derivatives such as fish oil and flour.

NUTRITIONAL ATTRIBUTES

Seafood products like salmon are more nutritious than red meats. Salmon is also a sources of Omega 3 and 6 fatty acids, vitamin B complex, and minerals. This led the FDA (Food and Drug Administration) to include it on the healthy foods list last year.

OCCUPATIONAL HEALTH AND SAFETY

At AquaChile, we strive to live a culture of occupational health and safety that guarantees care for people and facilities and contributes to the organization's sustainability.

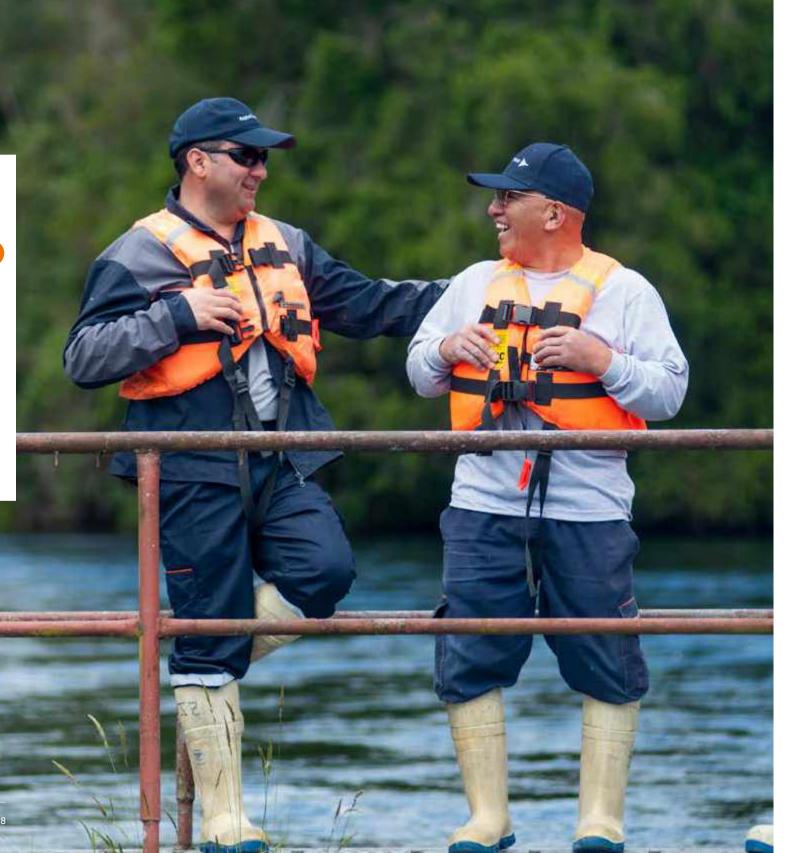

Our occupational health and safety strategy is based on four strategic pillars:

| Prevention | Health |
|---|--|
| Focused on eradicating serious and fatal accidents. | Ensuring complianc with and manageme of occupational heal protocols in order to eradicate job-relate illnesses. |
| | |

The programs that we develop in our preventative strategy reflect current legislation including Law 16.744 and complementary decrees related to workplace accidents and job-related Illnesses. The health and safety committee system scope includes our own staff and contractors and covers all of the business units.

In accordance with the Subcontracting Law, we have established the following actions regarding service provision companies and prevention programs:

- certify and monitor compliance.

nt lth

Culture and leadership

Strengthening visibility and ongoing and active participation of leaders at all levels.

Continuous improvement

Strategy focused on digital transformation that will increase the availability of equipment in our workplaces and enhance our efforts to improve.

• Accreditation of labor aspects of service provision companies for the Industrial Unit through platforms that

• Management programs based on strategic pillars.

PROGRESS ON GOALS RELATED TO OCCUPATIONAL HEALTH AND SAFETY

*Service provision companies.

ISO 45.001 Certification and implementation of technological platform for streamlining occupational health and safety processes.

We implemented a new project at the Cardonal Plant to move forward with the digital transformation process and implement standardized management and optimal health and safety in our operations. It consists of planning, managing, executing and monitoring prevention activities set out in the work plan through the use of a computer platform that allowed much of the evidence submitted during the ISO 45.001 audit to be published through said platform, resulting in the success of the certification process.

Main Results for 2022

- Recognition by the Chilean Safety Association for the decrease in the accident rate (-38%) and the claims rate (-42%).
- A year without accidents with fatal or serious consequences.
- ISO 45.001 Certification through digital platform.

MAIN MILESTONES FOR 2022

2022 Work Program

We designed the 2022 Occupational Health and Safety Program based on the four strategic pillars with a focus on the Production and Industrial Units.

Main Results for 2022

- Dissemination to all managers and the report team on the work plan and limits of the accident and • Implementation of ammonium and severity rates.
- 93% of planned activities Information gathering for electric implemented.
- Monthly review of the work plan at an expanded meeting with participation of 100% of managers and reporting team.

Cross-Cutting Risk Groups

We created cross-cutting risk groups comprised of area managers, operations teams and operational health and safety teams in order to address preparation of sites, training and infrastructure in a preventative manner.

Main Results for 2022

- fire group
- aroup
- Scuba group

Operational Controls

In order to preventatively plan tasks with a higher risk level, we develop operational controls for the execution of critical work through a safe work analysis and critical work permit.

Main Results for 2022

• Implementation of operational controls

A year without accidents with fatal or serious consequences.

We met our internal milestone of significantly reducing workplace accidents in critical activities related to diving.

Digital Platform for Process Optimization

We added technological tools to make the occupational health and safety processes at work sites more efficient. This included the creation of technological help platforms for the management of work programs.

Main Results for 2022

- 100% progress towards the goal of implementing a software project for occupational health and safety management activities at the Cardonal Plant.
- 100% progress towards the goal of connecting the Mosaikus platform with work pillars and evidence for ISO 45.001 Certification.

Implementation of the Service Provision Companies Program

We designed and implemented the Service Provision Companies Program in the Production and Industrial Units. We focused on active and ongoing participation in leadership and management activities.

Main Results for 2022

· Consolidation and implementation of a preventative management program for permanent companies.

Recognition for Our Reduction of the Accident and Severity Rates

The Chilean Safety Association recognized us in 2022 for our accident rate of 1.35, which is noteworthy at the industry level.

Main Results for 2022

Recognition for Our Reduction of the Accident (-38%) and Severity (-42%) Rates

PROCESSES USED TO IDENTIFY WORK-RELATED HAZARDS AND **EVALUATE RISKS**

We are in the process of standardizing the hazard identification and risk assessment method. The migration and standardization will be associated with an Expected Loss Value (ELV) method. which consists of assigning a value of likelihood and level of consequence to each risk. The risk level is the product of multiplying these two factors.

We are implementing the Bowtie methodology in our industrial units to address significant risks.

The findings management system is managed by the health and safety team. The safety findings (unsafe conditions or actions) are recorded on a control sheet, including a description of the finding, action plan and responsible parties.

Workers can report situations that may threaten their safety to their supervisors. Depending on the risk level, a mitigation or final solution will be developed.

INVESTIGATING INCIDENTS

We are in the process of standardizing our methodology for investigating workplace accidents. We are promoting a cause tree method, which is aligned with the guidelines set out by SUSEO

ROLE OF THE OCCUPATIONAL HEALTH SERVICE

We manage our relationship with the administrative manager established under Law 16.944 through a service agreement on preventative health and safety issues connected to our annual work program.

PREVENTION OR MITIGATION OF SIGNIFICANT NEGATIVE IMPACTS FOR WORKPLACE HEALTH AND SAFETY

- Strategic management for scuba activities.
- Crosscutting group for significant risks.
 - Fire working group Work plan and identification of infrastructure based on the NFPA standard.

HEALTH AND SAFETY INDICATORS

PARTICIPATION PROCESSES FOR THE DEVELOPMENT. APPLICATION AND EVALUATION OF OCCUPATIONAL HEALTH AND SAFETY

We seek to communicate a culture of health and safety to our employees and to build it with them. We also encourage them to actively participate in the assessment and application of our workplace health and safety systems. We have various mechanisms related to these efforts, such as: findings management, joint committees on hygiene and safety, health and safety capsules and health and safety campaigns.

JOINT COMMITTEE CERTIFICATION

Joint Committees on Hygiene and Safety

To measure the work and success of joint committees, three of the six industrial plants whose committees meet the requirement of being in place for over six months chose initial certification based on a tool that the ACHS has for that purpose. The goal of this certification is to recognize joint health and safety committees whose work on workplace health and safety has been outstanding within the organization, demonstrating legal compliance and a commitment to each worker's health and safety.

TALENT ATTRACTION AND RETENTION

We want to attract the talent we need and develop loyalty. To that end, we design and implement strategies and models for attracting, recruiting, hiring and incorporating people into our teams and retaining them in accordance with our culture.

We have solid models and procedures for ensuring the selection of employees who can meet challenges. These elements facilitate the process of incorporating into the company, ensuring equitable processes for all candidates.

We encourage internal mobility through retention and loyalty, encouraging our employees to develop and grow.

A total of 181 people (45%) were promoted in non-operator roles in 2022.

2022 HIGHLIGHTS

Industrial Season Plan Recruitment and hiring plan

focused on ensuring that the company has the workforce necessary to allow for operational continuity during the Pacific salmon harvest season at our industrial plants, focusing on hiring individuals who live near our plants.

Main Results for 2022

- We filled over 1,800 vacancies, meeting 100% of our need.
- ISO 45.001 Certification

Attraction and **Recruitment Plan**

Each year, we implement activities that allow us to maintain a connection to local and regional schools near our operations that offer programs related to our field. We give students information about our company and job opportunities.

- Over 40 attraction and dissemination activities

- School Program
- We implemented this program, which consists of initial selection and training for operator level roles at processing plants, for operator level positions in the Industrial Area.

Our challenge in 2022 was to

position our company

as one that creates job and

entrepreneurial opportunities

in the communities where

we operate, developing

partnerships that contribute

to local development.

Main Results for 2022

- The program was responsible for 78% of all hires for plants.
- Main Results for 2022 • 95 internships completed

Internal Mobility

Our selection process allows our employees to participate in internal mobility processes.

Main Results for 2022

• We hired internal candidates into 45% of the positions opened (at the non-operator level).

Our Value Operators Program

We provide tools on the value chain and the contribution made by each employee through their role.

Main Results for 2022

In 2019, 19% of non-operator vacancies were filled by internal staff. That percentage increased to

38% in 2021 and again to

45% in 2022.

• 527 participants (total of 1,010 instances of participation)

Policies or commitments for hiring workers

comr Hiring policy and commitment characteristics The organization has an ethical hiring policy. The policies and commitments prohibit the retention of identity documents such as passports. Workers are given contracts written in language that they can understand. The policies and commitments apply to the employment agencies used to hire workers New hires of workers with open-term 219 contracts 2021 160 59 men women

| YES | NO | |
| Yes | | The hiring processes are managed in a manner that ensures that the successful candidate meets the job requirements, avoiding biases in the processes with the respect to the rest of the applicants. |
| Yes | | The process does not include requesting original documents, which would prevent applicants from submitting personal documents. |
| Yes | | The processes and documents distributed are written in languages that align with the position and are appropriate for solid candidates. |
| Yes | | The processes managed by the employment agencies must follow the organizational process. |

CREATING A GOOD PLACE TO WORK

It has been four years since the four companies that comprise AquaChile joined together, and we have strengthened the culture. This allows us to focus on actions to improve the workplace climate and communication across our teams.

This inspires us to create work environments in which each employee can trust in the people on their teams, feel proud of what they do and enjoy their experience with their colleagues.

WORKPLACE CLIMATE GREAT PLACE TO WORK

Each November, we evaluate our workplace climate in collaboration with the company Great Place to Work. This ensures that the process is confidential and transparent, and guarantees the objectivity of the analysis of the results.

Once the results are ready, each segment owner must create an action plan focused on opportunities for improvement that are within reach of the team and contribute to the organization's workplace climate. The organizational development team monitors and supports the implementation of the plan over the course of the year.

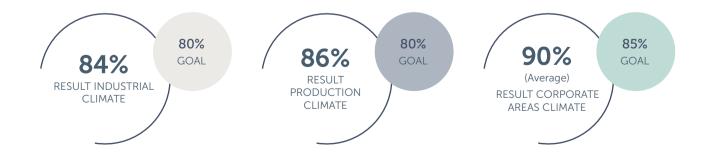

Labor Climate Goals 2022

make AquaChile an increasingly good place to work, it is important to center people and to maintain positive workplace environments.

In order to

2022 CLIMATE PLANS

Managing work environments is an important matter for our company. At the beginning of the year, we created the 2022 Workplace Environment Management Plans based on the results of the 2021 Workplace Climate Survey.

We have over 200 plans and a total of 900 initiatives to which managers, team leaders and employees have committed in order to continue to improve the workplace climates in their areas

01

02

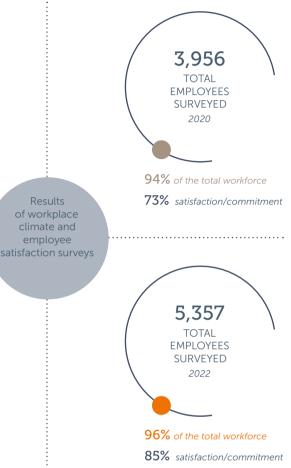

Great

Place

Work

То

Milestones in 2022

Construction of Macroplans

These are generated by each manager in an effort to enhance their workplace climate indicator. In 2022, 90% of the plans were implemented.

Construction of Microplans

Microplans or individual plans are created by each segment leader. They are focused on enhancing their workplace climate indicator. In 2022, 98% of the plans were implemented.

BENEFITS

We held training activities and disseminated information about the benefits provided to our employees and their families. These are mainly focused on health, education, housing and wellbeing.

When employees face challenges such as serious illnesses, fires or emergencies, we stand by them through social support programs.

New benefit: contribution of 50% of the FALP agreement.

AquaChile has co-financed the FALP oncology agreement for employees since 2022.

Training activities focused on benefits

We conduct campaigns and dissemination programs throughout the year in various parts of our plants, salmon farms, seawater centers and central offices on the benefits available to our employees.

Over 90 children of employees receive student benefits in 2022.

The 2022 Student Benefits program recognized over 90 children of employees who work in our processing plants, farms, and central offices in regions IX through XIII. This comes in the form of concrete support so that they can continue to obtain excellent academic results.

COMPENSATION

We determine compensation based on the level of responsibility of each role, ensuring internal equity and competitiveness with the rest of the industry. We focus on each worker's responsibilities and contribution to the organization.

PARENTAL LEAVE

At AquaChile, we meet the legal requirements set out in regard to parental leave and support families throughout this new stage of their lives.

Average days used for parental leave each year

INTERNAL COMMUNICATIONS

In order to keep all of our employees informed of important The actions undertaken during the reporting period include issues, the company delivers messages and communications presentations by the marketing team at processing plants to all members of the workforce. We are constantly seeking designed to show employees how the final product is marketed. to improve our internal communication channels and how to better convey messages.

We have three internal communication channels:

DIVERSITY AND INCLUSION

We promote an inclusive culture in regard to plurality and beliefs, establishing behavior models that guarantee equality, non-discrimination and recognition of diversity.

In accordance with current legislation on diversity, inclusion and non-discrimination, we promote the inclusion of people with disabilities in the company. To that end, we analyze the demands of the tasks and roles in our units and review the best possible match for job candidates.

To support this labor inclusion process, in 2022, we worked on the Inclusion Policy and created inclusion management teams in various units. Once certified, these individuals support the recruitment, hiring and training processes for employees with disabilities.

Our internal regulations define discrimination and present procedures to be followed if an employee experiences it.

2022 HIGHLIGHTS

Training on the Employment Inclusion Law

We train teams of people in our units on the general contents of Law 21.015 and on the process of hiring and monitoring individuals with disabilities. This work was conducted by the employment inclusion working group (which is comprised of labor compliance, corporate management and recruitment and hiring leaders).

Main Results for 2022

• 15 individuals trained

Inclusion Manager Accreditation

We conducted an accreditation process to certify inclusion managers.

Main Results for 2022

• Results are pending for 17 people

Inclusion Working Groups

In an effort to promote the accreditation of the Company's inclusion managers, we implemented working groups in our Human Resources areas to create inclusion committees.

Main Results for 2022

• 2 working groups created

Compliance with Inclusion Law 21.015

We have met 99% of our organizational goal, even in the most remote areas.

Main Results for 2022

• 99% overall compliance

Our anonymous Complaint Channel allows parties to report discrimination or harassment. The Company has investigation procedures for any cases that may arise.

During the reporting period, no complaints involving sexual harassment or discrimination were reported in accordance with Law No. 20.005.

PERFORMANCE EVALUATION

At AquaChile, we apply three types of performance evaluations: Individual Performance Management (IPM), Grow Out Performance Management (GPM) and Individual Performance Feedback (IPF). During the reporting period, we evaluated and provided feedback to 100% of our eligible workers, creating a space for reviewing the degree to which goals we met and their participation in career development and opportunities for improvement.

Individual Performance Management (IPM)

100% employees evaluated IPM 2021.

68.7% 31.3% women men

100% Employees evaluated IPM 2022

67.9% 32.1% men women

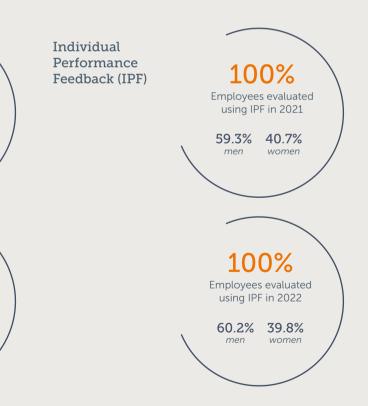

PERFORMANCE MANAGEMENT

Performance evaluation allows us to measure the effectiveness of the programs that we have implemented and our progress towards our goals. It is also an important career development indicator within the company.

We apply three types of performance evaluations:

- Individual Performance Management (IPM)
- Grow Out Performance Management (GPM)
- Individual Performance Feedback (IPF)

RELATIONSHIP WITH OUR UNIONS

One of our company's fundamental values is to establish and maintain good labor relations both individually and collectively. The senior management and Executive Committee promote respect for workers' rights, encouraging freedom of association and collective bargaining.

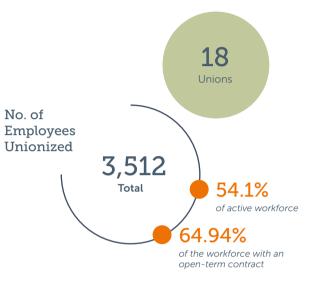

We maintain ongoing contact with union leaders in order to understand and manage all workers' perspectives.

In an effort to ensure freedom of association and collective bargaining in our value chain, we have an active program that is established in collaboration with the senior management each year and communicated to leaders.

Monthly meetings are held in each business unit with each union organization. We also established an open door policy for our employees and union organization leaders.

This work means that all AquaChile employees have benefits based on their role and work site. As an organization, we take steps to provide a responsible value offering to all employees.

We have not identified operations, countries or geographic areas with operations or suppliers in which the right of workers to exercise freedom of association or collective bargaining can be restricted or runs any significant risk.

Dialogue with unions

We promote work with union organizations based on ongoing development of trust-based and collaborative work relationships. This allows us to achieve the best conditions in each area of work.

This effort is based on reaching reasonable agreements with each organization.

We stay abreast of changes related to work conditions that should be implemented both internally and with our service providers.

WE REACH THE WORLD WITH OUR

OUR PRODUCTS

At AquaChile, we have the challenge of making safe, high quality products in a way that balances the interests of the people and communities that surround us.

ATLANTIC SALMON

This large, long bodied fish with a characteristic silver color with black spots on its body is known for having a very versatile meat that can be used in all sorts of cuts. It is considered to be very healthy due to its high protein and Omega-3 content.

FOOD TRENDS

AquaChile has addressed the following global seafood trends:

Increased interest in sustainable products

()

Consumers are seeking sustainable seafood produced responsibly in a manner that respects the environment throughout the value chain.

Greater preference for healthy foods

(

Consumers are increasingly seeking out healthy food options. Salmon is an excellent source of protein, Omega-3 and other nutrients.

PACIFIC SALMON

This species, also known as Coho, has silver sides and a dark blue back. It is mainly known for the intense red color of its meat. Pacific Salmon is very popular in Japan, and we have opened various other markets for this product thanks to its versatility.

> Increased demand for frozen seafood.

**

01

02

Over the past few years, there has been an increase in interest in products with longer shelf lives that are easier to store and transport.

TRADEMARKS

Our brands create value for our clients and consumers, creating more closeness and connection with our global markets.

AQUA 🐎

We are a leading salmon brand. Each month, we provide healthy, tasty food to over 150 million people around the world with salmon from the southernmost part of the planet.

We produce and distribute the highest quality salmon through environmentally responsible production, cultivating close relationships with our neighbors and focusing on innovation.

Like the water, we never stop. We have an entrepreneurial spirit. We are simple, austere and always put our soul and passion into everything we do.

Our purpose is to feed the world tasty and healthy food while protecting our environment. Our mission is to be the most reliable strategic partner possible, delivering quality salmon year-round and providing superior service.

AquaChile 🔛

We are a pioneering ultra-premium brand in sustainable practices.

We have sought to farm the perfect salmon for the past ten years, focusing on the highest quality and respect for the environment. As such, our form of farming, harvesting and selling salmon is the result of an in-depth, detailed study of each stage.

Our salmon is farmed in Patagonia, where two of the coldest ocean currents in the world come together. We have a passion for perfection.

Our purpose is to provide the world with the best salmon, and our mission is to deliver an ultra premium product while being committed to sustainability which, together with excellent service, makes ours the favorite salmon of chefs.

PORTFOLIO DIVERSITY AND **INNOVATIVE PRODUCTS**

2022 HIGHLIGHTS - CLIENTS

• The Asian market is recovering from the pandemic and local consumption is returning to normal.

Markets

- Taiwan
- Brazil
- Latin America

Adaptations

Highlights

Markets

Thailand

Indonesia

Adaptations

- We improved sales in alternative markets (Korea).
- We promoted the sale of Pacific salmon (+73%).
- We are selling Aqua brand Atlantic salmon portions to retail customers in Brazil.
- We are promoting the sale of Pacific salmon in markets like Colombia and Mexico.

FOODSERVICE

• Strong post-pandemic recovery in the sector.

• We expanded the range of products

that enter the Asian market.

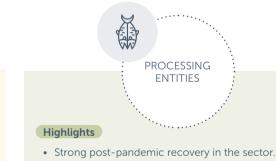

• The Aqua brand is now available in Japan.

Markets

- China
- Japan

Adaptations

- We are selling products with added value through China's main e-commerce channel.
- We developed products with added value in Japan for the retail channel in that market.

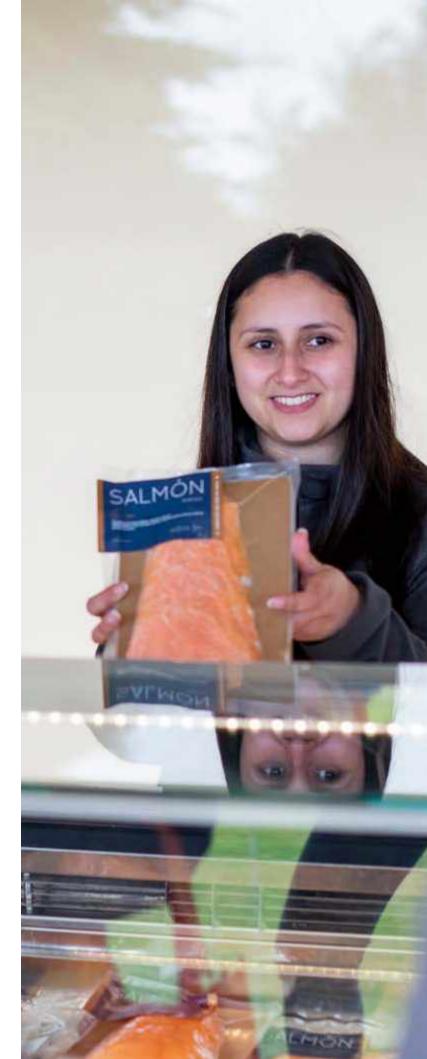

Markets

- Korea
- Taiwan

Adaptations

• We have strengthened our relationship with key stakeholders, which significantly increases our participation and penetration in the market.

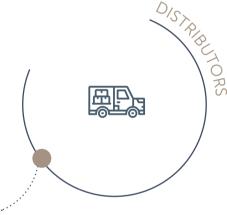

01

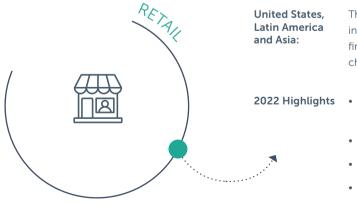

AquaChile 🔛

MAIN SALES CHANNELS

This market represents 45% of our clients, which allows United States: us to have deep reach and penetration. Latin America: We work with the region's leading distributors, promoting consumption through various channels and connecting with final customers. **2022 Highlights** • Significant increase in volumes of Pacific salmon in markets like Colombia and Mexico. • We have begun to sell fresh Atlantic salmon in Uruguay.

The retail segment remained strong in various markets in 2022. The United States maintained high demand of final consumers. We entered the Latin America and Asia channel with the brand AQUA.

- We introduced value-added products in markets like Brazil and Peru.
 - We introduced the skin pack in Mexico.
 - We increased the brand's retail presence.
 - We are reaching Japanese retail directly with AQUA brand products.
 - We have new retail portion packaging for the Brazilian and Chinese markets.

2022 HIGHLIGHTS

Pacific Salmon Diversification

We diversified the sale of Pacific salmon around the world.

Main Results for 2022

 Increased sales in Colombia, Mexico, Brazil and Asia.

CUSTOMER AND CONSUMER SATISFACTION AND **OUTREACH**

In 2022, we developed strategic actions in the area of customer and consumer satisfaction and outreach aligned with one of the pillars of the business plan: connecting with the consumer.

This pillar focuses on deepening our penetration in the distribution chain through vertical integration in order to expand our sales towards retail, food service and e-commerce with added value and brand products in order to ensure long-term profitability.

The Company used an omnichannel customer outreach approach in all markets. We used email, phone calls and text messages to ensure fast and effective communication.

01

.....

2022 HIGHLIGHTS

Post-Sales Area Creation

In an effort to reinforce our commitment to the customer, improve response times, enhance post-sales management and decrease the customer complaint rate, we implemented procedures and mechanisms involving various areas of the Company.

Main Results for 2022

• We reinforced our commitment to customers, improving our post-sales service.

Traceability methods and their scope throughout the value chain.

All of our products can be traced by lot or tracing code. Digital tools can be used to obtain the information of origin (farm site, cage and supporting documents). They also provide information on processing and dispatch. The lot is marked in the process and on the product label.

Product identification and management process and ingredients related to customer nutritional and health concerns.

There is an official control procedure for finished products with microbiological, chemical and organoleptic criteria.

Additional internal controls are used in every plant. The analyses are carried out by laboratories accredited by the National Fish and Aquaculture Service (Sernapesca) and the National Normalization Institute (INN).

We also periodically verify nutritional components using assays performed by the Industrial Design and Development Area. The samples are submitted to laboratories accredited by the National Normalization Institute.

Net Promoter Score (NPS)

This survey measures customer satisfaction with products, services, visits to the company and the reception of products and services.

CONTINUITY AND OPERATIONAL EFFICIENCY

LOGISTICS

This area is responsible for meeting the needs of internal clients and for avoiding stock breaks. Our priority is always the quality of the salmon and raw materials.

A series of external complications arose in 2022 that made logistical operations more difficult. These included the truck drivers' strike, weather conditions that interrupted normal operations, mechanical failures and increases in the prices of services.

GPS MONITORING

We use GPS technology to monitor the entire fleet in real time, which affords us a holistic perspective on the operation and the ability to engage in detailed oversight. This facilitates the implementation of reports, creation of new KPIs and responses to incidents.

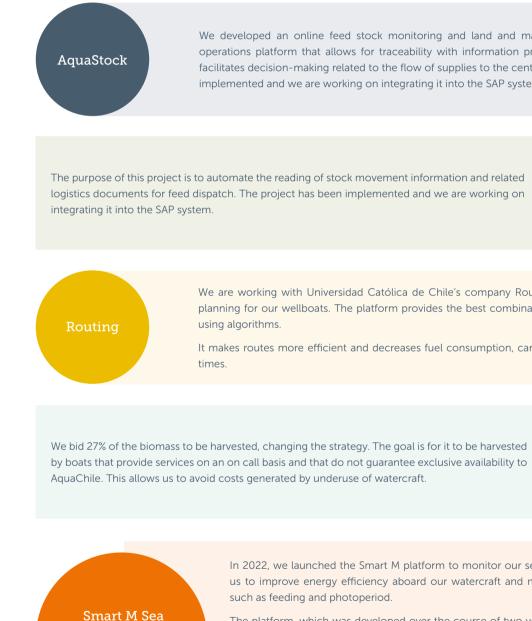

SUPPLIERS

Some of our service providers are key operations partners and play an important role in problem solving. We have had business relationships that last years, allowing us to trust that operations will be performed with the highest standards set by AquaChile and the industry.

ш ш ш

2022 HIGHLIGHTS

Center Monitoring

Platform

reducing CO2 emissions.

We developed an online feed stock monitoring and land and maritime dispatch logistics operations platform that allows for traceability with information provided in real time. This facilitates decision-making related to the flow of supplies to the centers. The project has been implemented and we are working on integrating it into the SAP system.

We are working with Universidad Católica de Chile's company Routing to improve logistics planning for our wellboats. The platform provides the best combination of routes for harvest

It makes routes more efficient and decreases fuel consumption, carbon emission and supply

Harvest

In 2022, we launched the Smart M platform to monitor our sea centers. This will allow us to improve energy efficiency aboard our watercraft and monitor critical processes

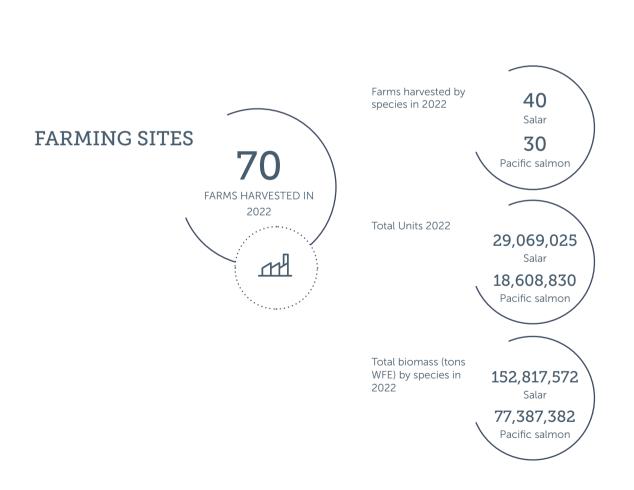

The platform, which was developed over the course of two years in collaboration with the company Wireless Energy, has four main benefits: observing the continuity of critical processes remotely, performing preventative maintenance, decreasing energy costs and

The incorporation of this technology allowed us to save 15 to 20% on electricity consumption and diesel use and increased operational continuity by over 80%.

Annual average success with product delivery to Chilean customers

HARVEST SUPPLY FULFILLMENT

| 97.3% | 96.9% 2021 |
|--------------------------|-------------------|
| SMOLT SUPPLY FULFILLMENT | |
| 93.9% | 92.5% 2021 |
| FEED SUPPLY FULFILLMENT | |
| 97.1 | 90.8% |

INDUSTRIAL

Our focus in the Industrial Area is the quality of products and processes. We strive to maximize yield by incorporating oversight and control systems, always maintaining a pleasant and safe workplace for all employees.

In 2022, we set specific targets for industrial plants related to improving productivity, incorporating new technologies and increasing cost competitiveness.

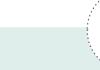

Implementation of SP Meatline

We introduced a control and performance management system that improves the yield of some cuts.

Automatic deboning in Quellón

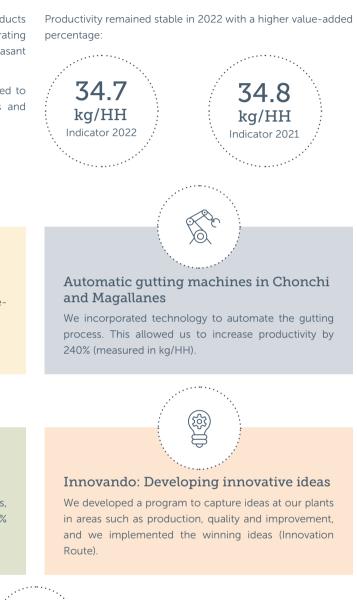

We implemented an automatic deboning process, increasing the productivity of the process by 280% (measured in kg/HH).

Use of electric stunning

improved fish stunning.

4

We began to use this equipment at the Chonchi Plant in August. It improved production flows, with more units processed and

HATCHERIES

We focus on achieving production and cost goals set out in the budget in order to maintain the high safety standard for our breeders and biosafety in our facilities and to improve production processes and infrastructure in order to increase competitiveness.

We focus on achieving production and cost goals set out in Our genetics program is based on family formation and the use the budget in order to maintain the high safety standard for of sentinels to to evaluate breeding stock.

Catripulli salmon farm sperm cryopreservation laboratory We implemented an Atlantic salmon

sperm cryopreservation laboratory for genetic transfer across generations and increased our capacity to select for characteristics through sentinel genotyping at the plant.

Genomic Selection In the case of Pacific salmon, we strengthened the program by implementing genomic selection to improve the precision of health

characteristics like SRS and plant

characteristics such as color and yield.

Atlantic Salmon Genetic Program

Sentinel Genotyping

We began to genotype Atlantic salmon

sentinels in 2022, which allowed us to more precisely select breeding stock.

Sludge extraction using dredging and

dehydration tank at the Magdalena

salmon farm We implemented an autonomous

cleaning and sludge accumulation

system in the decanting pool, increasing

the efficiency and autonomy of the process.

Capture of Sentinel Information at the Plant

We automated the process, which has a favorable impact on the quality of the information.

Implementation of Androvision software to analyze sperm quality of Atlantic salmon at the Catripulli salmon farm

We replaced the previous software to ensure the continuity of the process.

Photoperiod and water cooling management for spawned Pacific salmon breeders in 2022

We used a differentiated photoperiod and temperature control to move up the spawning process compared to 2021. Production and operational goals met at the end of the 2022 period- Salmon farms

> 100% Atlantic salmon egg production 2022

100% Pacific salmon egg production 2022

100% Expansion of Pacific salmon room incubation area to

100%

increase capacity

Implementation of a laboratory to cryopreserve sperm at the Catripulli hatchery Target: Freezing sperm from spawning 2022

Increased capacity to count and select Atlantic salmon eggs through the acquisition of a second prosorter machine for egg pecking.

This strengthened the egg selection process in terms of both volume and quality, ensuring that it will be possible to meet dispatch dates during weeks when there is a high volume to process.

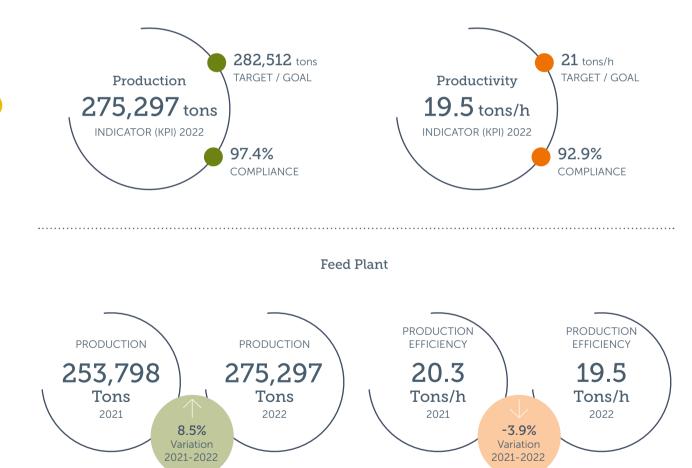

AquaChile 🔛

FEED PLANT

In 2022, we completed work on the third line of the Pargua feed plant. We currently produce 100% of the feed we use at sea. We meet feed needs from farming sites on an ongoing basis. The logistical coordination of the movement of feed and the raw materials needed to manufacture the diets is exhaustive, allowing our fish to consume feed with high nutritional quality and organoleptic standards.

Internal feed production is important because it allows us to provide the best nutrition to our fish. We have a presence in every process that is part of the production chain, from the assessment of raw feed materials to the guality of the fillet of a salmon that was fed our products. This allows us to monitor nutritional and quality parameters for finished products, always focusing on continuous improvement of the food.

We have a quality plan that evaluates raw materials from the nutritional quality and safety perspective and are constantly

providing feedback to our suppliers. Each raw material is used in different feed formulations based on specific nutritional guidelines in order to provide our fish with all of the components necessary for them to express their growth potential in the variable environmental conditions in which the salmon production system is developed. The figure below shows the percentage of groups of raw materials used in the diets in 2022.

The diets manufactured in our plants are based on biological growth models and sedimentation of nutrients, which are unique to each stage of fish growth. We also consider all of the physical particularities of salmon food using a highly automated manufacturing process. Both aspects are related to obtaining the best results in the ocean. This is reflected, for example, in the reduction of the feed conversion factor (FCb), which is estimated to have decreased by 5% between 2021 and 2022.

Percentage of the raw material group incorporated into the salmon diet in 2022 Pargua Feed Plant

21.1% raw materials of marine origin 3.1% microingredients 0.62 ratio of fishmeal dependence 1.83 ratio of fish oil dependence

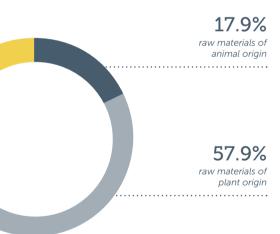

01

02

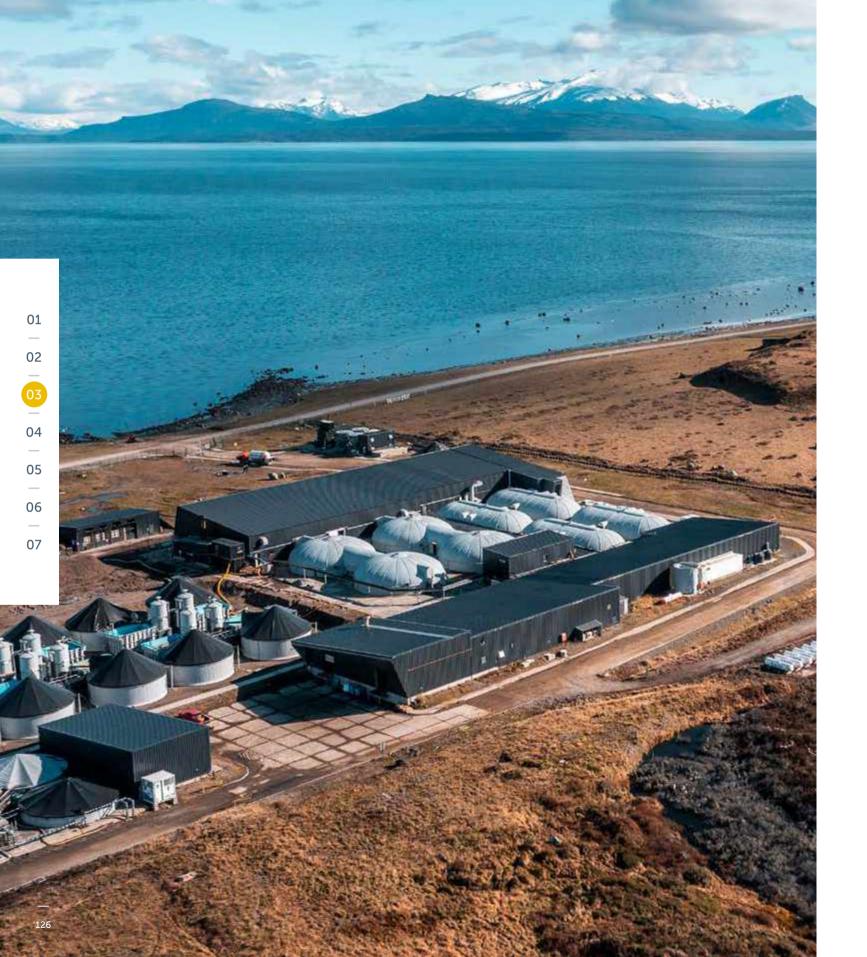

The feed plant complies with various international certification standards, including ISO-9001, ISO-14001, ISO 48001, Global GAP and BAP. This allows us to maintain a robust traceability system and control processes.

The Company's focus on sustainability also challenges us to be increasingly efficient in the use of marine raw materials, seeking out nutritionally viable alternatives to allow us to decrease their inclusion in the diets. During 2022, the feed plant kept the fishmeal forage fish dependency ratio (FFDRm) and the fish oil forage fish dependency ratio (FFDRo) below the maximum limit set in the Aquaculture Stewardship Council (ASC) standard even though feed production increased over 2021.

We are committed to feeding healthy salmon to people around the world.

AquaChile 🔛

HEALTH AND CARE OF OUR FISH

WELLBEING

Our concern for animal wellbeing spans the entire value chain and covers each stage of the process. Sustainable and health production can only be achieved if our salmon are comfortable, disease-free, well fed and can engage in normal behavior.

07

Bio-security

- Our biosafety protocols allow us to add fish to all fresh and salt water breeding facilities.
- We anesthetize the animals prior to stressful processes such as vaccination and ultrasounds.

(keo)

Health Management

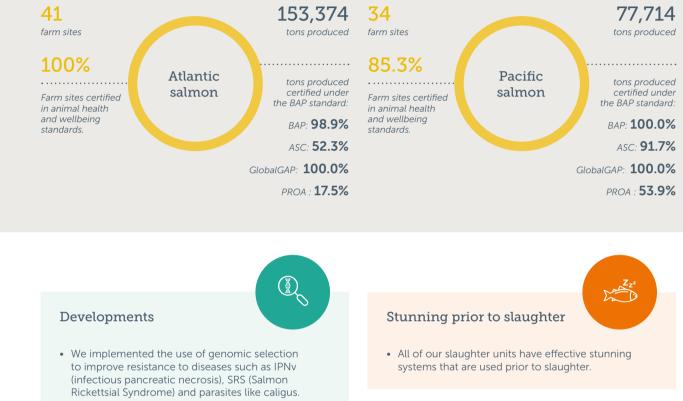

- We use antibiotics only if the health of our animals is at risk. The medications are proscribed by veterinarians and comply with protection periods. They are not used to promote growth.
- We vaccinate and protect our fish against illnesses when they are young to strengthen their immune system when they enter the sea. All of our fish are vaccinated.
- We do not use growth promoting hormones.

7 FOCUS AREAS OF WELLBEING

Transportation

• We manage transportation in a friendly way with low transport density in order to decrease stress.

- We incorporate CO2 extractors, monitors and oxygen control mechanisms into our trucks.
- We use high tech wellboats to harvest, monitoring key parameters (Ph, oxygen, temperature).
- The maximum densities are:
- Smolt transport: Truck: 50 kg/m³; Ships: 60 kg/m³
- Adult Transport: Wellboat: 120 kg/m³

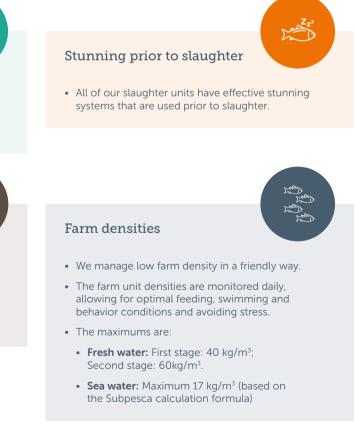

(sal)

No use of GMOs

- We do not use genetically modified salmonids.
- In order to make our activity more efficient and sustainable, we have a genetic improvement program based on the formation and evaluation of families of fish.

Percentage of production (in tons) of sites certified for third parties in animal health and wellbeing standards

THE HEALTH OF OUR FISH

The health of our salmon and how we manage it is a key variable in the production process. It allows us assure our customers and final clients that our products are safe.

Our approach is preventative. We use tools such as strict biosafety protocols, vaccines, genetic and nutritional improvements, smolt quality and improved production infrastructure to minimize the risk of disease.

We monitor our processes regularly to avoid losses due to mortality and minimize the use of antibiotics and antiparisitics.

We have protocols and conduct ongoing assessments to ensure that our salmon do not contain traces of antibiotics.

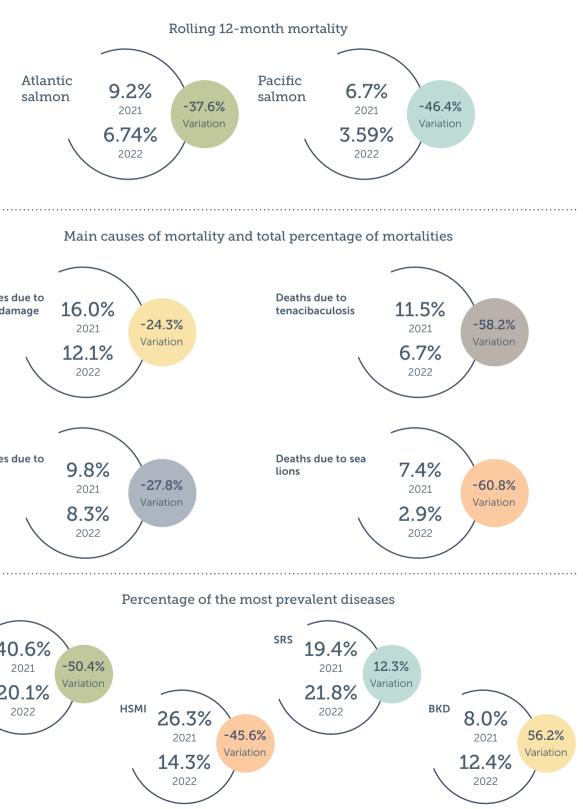

AquaChile leads the list of PROA-certified sites

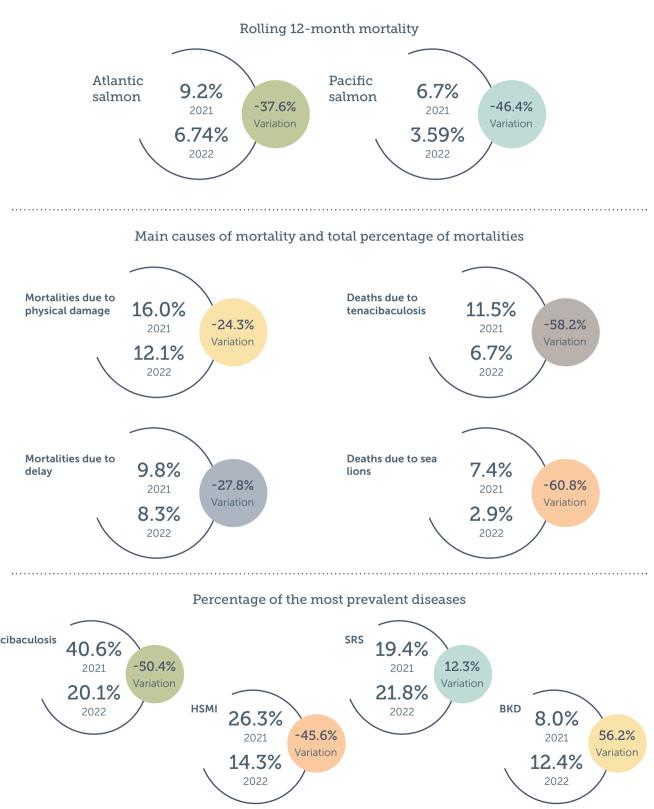

At AquaChile, we lead the PROA (Antibiotic-Free Project of the Antimicrobian Use Optimization Program) certified centers, with 21 PROA-certified centers harvested.

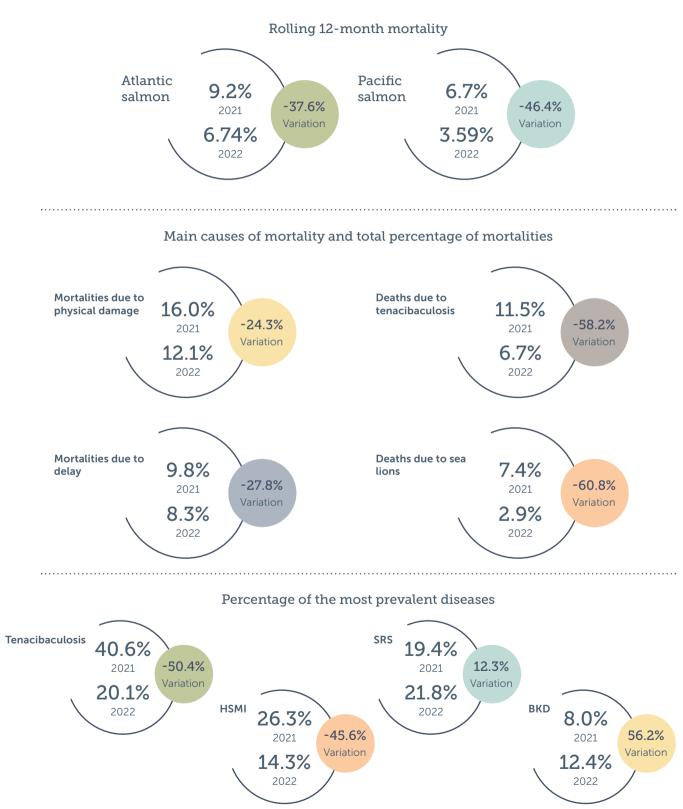

This program is framed by guidelines on the struggle against antimicrobial resistance established by international technical agencies like the World Organisation for Animal Health (OIE), the United Nations Food and Agriculture Organization (FAO) and the World Health Organization (WHO).

Health plan enhancement

This plan involves a new vaccine protocol, early surveillance of disease and antiparasitic treatments that improve animal wellbeing and contribute to lower antibiotic consumption.

FOOD SAFETY

At AguaChile, we promote a culture of safety and guality in each of our processing plants. We identify, evaluate, manage and communicate the risks present. To this end, we implemented Global Food Safety Initiative (GFSI) standards and regulations

for safety and quality management. These are based on the execution of HACCP (Hazard analysis and critical control points) Plans, food fraud and defense programs.

ACTIVITIES RELATED TO QUALITY AND SAFETY

Measurement and development of a culture of quality and safety

In keeping with the GFSI Safety Culture and BRCGSV8 Food Safety Culture Excellence guidelines, we evaluate 29 different topics that are grouped into nine areas. They summarize the main areas that comprise the organizational culture in regard to safety and quality: commitment, communication, training, facilities, recognition, performance evaluations, responsibilities, procedures and continuous improvement.

Participation:

• 2,008 people (+12.2% compared to 2021).

Key Result:

• The "Culture" indicator increased from 74.9% in 2021 to **78.3%** in 2022 (+3.4%).

Food Safety Seminar

We held the first food quality and safety seminar offered by AquaChile. A panel of rapporteurs presented on key topics for the food industry and food safety.

Microbiology and bacteria

Supervisors and quality monitors at the Cardonal, Calbuco and Quellón plants presented the most common microbiology and bacteria in the industry to their colleagues.

Participation:

• Over 600 people.

"Innovating from the Ground Up" Industrial Innovation Route

This activity is part of AquaChile's innovation program. It is designed to encourage and promote the development of ideas and proposals for improvements in processing plants. Quality and safety is one of its four pillars.

Results:

• **702** ideas related improving quality and safety (19% of the opportunities identified, the third highest ranking category in terms of capture).

Interactive safety awareness activities

These activities are designed to teach processing plant workers about safety, creating a feeling of belonging to and involvement with the product that they handle. Some of these initiatives are part of the celebration of Food Safety Month each June. The activities held are listed below:

- Lunches made with salmon prepared by the plants' employees.
- An interactive microbiology stand where plant workers can use laboratory equipment, taking samples, observing microorganisms and understanding their importance.
- Dissemination of audiovisual materials with messages promoting practices that contribute to food safety.
- Safety knowledge competitions and the distribution of merchandise with messages about safety.

Progress towards goals related to food quality and safety reached by the end of 2022

100%

(Result: 3) Number of unfavorable results of the Sernapesca official verifications program 2022 GOAL:

To reduce or maintain the result achieved in 2021 (6)

In 2022, we evaluated 100% of the product categories considered in regard to the impact on health and safety. These categories include: cooled/refrigerated Atlantic salmon, frozen Atlantic salmon, cooled/refrigerated Pacific Salmon, and frozen Pacific salmon.

Volume of production of sites certified by food safety and security standards Industrial: Process in manufacturing plants

| | ASC | BAP | GLOBAL GAP | IFS |

PRODUCT SAFETY AND QUALITY

The final part of the production cycle is salmon processing. Our processing plants have rigorous food safety and security standards that allow the salmon that we sell to meet the requirements of the most discriminating markets in the world.

AQUACHILE

PLANTA DE PROCESOS

YI

INTERNATIONAL STANDARDS

We meet all national and international standards related to animal processing and food production.

CERTIFICATIONS

We engage in conscious efforts to obtain the most prestigious international certifications in our industry. This allows us to guarantee the safety and quality of our products and prove that we respect best practices and the environment.

processing plant audits.

were conducted during the reporting period. The process complied with all international standards. All of the plants were certified. In the case of IFS, all plants were rated as "high level."

> ISO 45.001 Certification at the Cardonal Plant We implemented ISO 45.001 in the industrial units in 2022.

Aquaculture Stewardship Council (ASC)

This entity helps companies and organizations to promote and identify responsible aquaculture production. It covers a wide range of aquaculture processes on a global scale. It includes environmental and social aspects in order to guarantee responsible production.

BAP

勝ち

GLOBALG A.P.

The Global Aquaculture Alliance (GAA) developed the BAP standards, a voluntary certification program for aquaculture facilities that addresses social and environmental responsibility, animal wellbeing, food safety and traceability.

GLOBAL GAP

This covers the best practices protocols managed by Food Plus GmbH, a non-profit organization that develops standards for certifying processes for obtaining primary sector products on a global scale, including aquaculture.

ISO 9001

This institutional standard is applied to Quality Management Systems and is focused on the elements that a company must have to have an effective system that allows it to manage and improve the quality of its products or services.

ISO 14001

The International Standard for Environmental Management Systems helps to identify, prioritize and manage the company's environmental risks.

ISO 45001

Establishes the requirements for the creation, implementation and operation of an effective occupational health and safety management system.

Summary of AquaChile production cycle certifications

| Certifications through December 31, 2022 | ASC | BAP | GLOBAL GAP | IFS | ISO 9001 | PROA SALMON | ISO 14001 | ISO 45001 | HALAL | KOSHER |

AquaChile 🔛

IFS

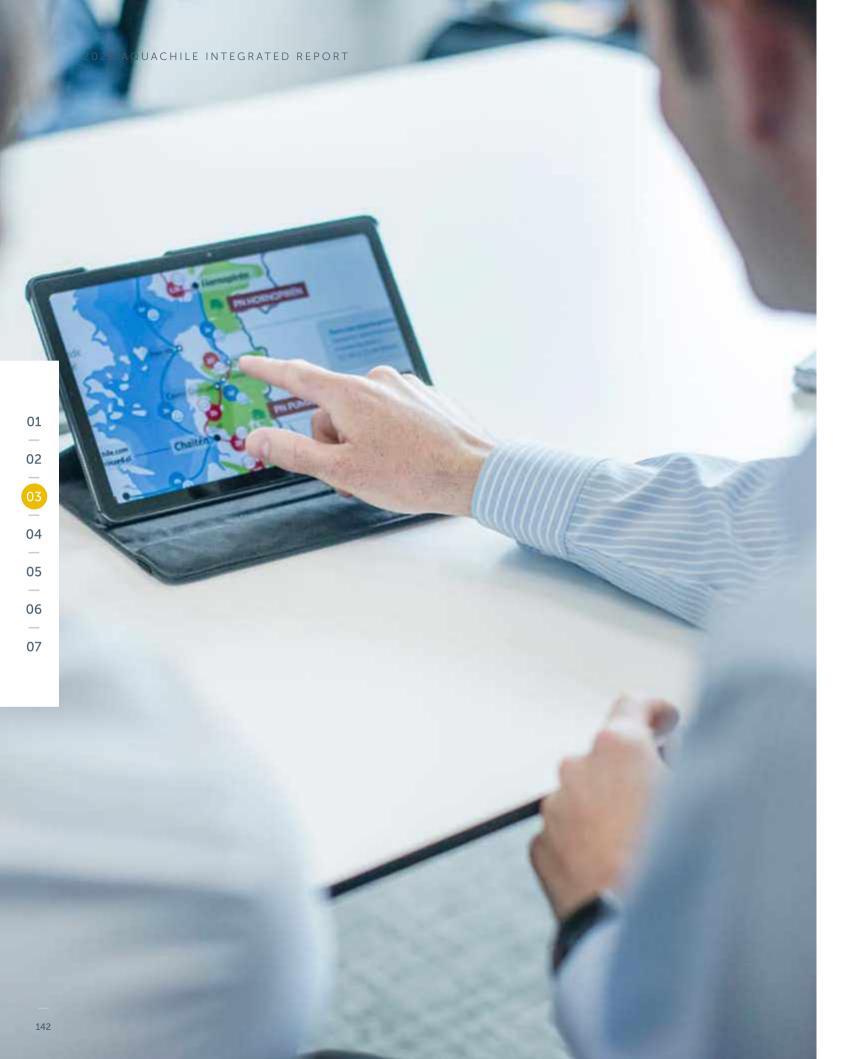

This certificate indicates that the company has established appropriate processes for guaranteeing the health and safety of the products it produces.

KOSHER

The word "Kosher" means "apt," and determines which foods can be consumed by members of the Jewish community.

HALAL

This certification establishes that a product or process complies with Islamic Law so that is can be consumed.

INNOVATION IN PRODUCTS AND PROCESSES

PROGRESS ON THE DIGITAL **TRANSFORMATION OF AQUACHILE**

In April, the People Division reached a milestone related to digital transformation: compensation for the entire company was processed using the new SAP-Success Factor version with payroll in the cloud.

This project allows us to use a system that contains best people management practices at the global level with an autonomous and standard payroll.

INNOVATION

During 2022, we implemented internal innovation initiatives and initial developments with open innovation in partnership with startups and universities.

INNOVATION, DEVELOPMENT, TECHNOLOGY AND DATA MANAGEMENT GOALS

EBITDA Goal TO IMPROVE THE PERCENTAGE OF EBITDA THAT COMES 2025 FROM INNOVATION YEAR TO ACHIEVE PROJECTS FROM 8% THE TARGET / GOAL TO 20%.

Meatline Project

This industrial production software is focused on standardizing and controlling production processes.

6 plants

have implemented it.

DIGITAL TRANSFORMATION **MILESTONES**

Monitoring of key variables

Centralization of production data with environmental data for improved animal wellbeing control.

Safe Scuba

Use of scuba sensors to increase oversight and safety of the services that operate with us.

Photoperiod Monitoring

Centralized photoperiod system monitoring system that allows us to control light intensity and hours of operation in order to correctly stimulate the maturity of our fish.

Fuel monitoring

Online monitoring system that uses sea water site electricity generators and an operation alerts system that allows for optimal use of fuels.

Innovating from the Ground Up

This program encourages the development of innovation in all areas of the Company, promoting the participation of operators, technicians, department heads and others.

"Innovating from the Ground Up" AquaChile Innovation Route

In 2022, we held the first AquaChile Innovation Route, an initiative designed to promote spaces for identifying opportunities, creativity and idea development with the support of the Industrial Projects Department.

Over 60 projects focused on sustainability, operational health and safety, improved performance and productivity were submitted. They were developed and identified by supervisors, analysts, heads and assistant managers. We began to implement 61 projects in August.

Product innovations

The Sales, Design and Development and Suppliers units work together to test and validate new technologies and market trends. As a result, we develop new formats and projects like Socialab, a key player in global innovation. skin pack cubes on an ongoing basis.

Key processes that have benefited from digital innovation, automation and similar initiatives.

Partnerships

We have a partnership in place to develop innovation processes within the Company with the innovation consulting firm

ATC CENTER FOR **INNOVATION**

The Aquaculture Technology Center (ATC) is an innovation and biotechnology transfer center. It was founded by AguaChile in 2007 to manage continuous improvement processes in the Company and evaluate the best available technological solutions. This approach accelerates innovation and knowledge creation processes that allow us to manage the efficiency and yield of our production processes.

This biotechnology unit is located in Lenca, in the Los Lagos region, alongside the river of the same name. Its 2,000 square meters of the most advanced technology ensure that the highest biosafety and quality standards are met in each of the assays conducted.

Biotechnology transfer and validation processes are conducted through the execution of bioassays under controlled condition. These are conducted in a wide range of technological solutions such as disease resistance, genetic improvement programs, the evaluation of feed diets, development and validation of veterinary products and vaccine testing and challenge tests. All of these bioassays developed in Atlantic and Coho salmon allow AquaChile to have ongoing access to technical information that is transferred to the respective units to be applied in their processes, increasing their quality and efficiency.

The ATC Innovation Center facilities have 16 isolated and independent recirculation systems and another five reuse systems. This allows for high flexibility in the execution of various types of assays independently. Each one of these systems can be configured to use fresh or salt water as required for the bioassay. They also can be conducted in a broad temperature range of 5°C to 28°C. All of this is performed by validated bioassay models and executed by a specialized multidisciplinary team.

In March 2023, we signed an agreement with the Interdisciplinary Center for Aquaculture Research (INCAR) to establish a synergic interaction focused on the development of knowledge, technology and innovation directed at our processes and care for Chile's southern oceans so that they can be responsibly farmed.

AQUACHILE LABORATORY

The AquaChile Laboratory was launched in 2009. It provides production support services to the Company. It is accredited under Standard 17.025 and is part of the network of laboratories authorized by the National Fishing and Aquaculture Service. This unit is located in the city of Puerto Montt.

Its main function is to support the diagnosis of fish pathogens for production units (farms and grow-out sites) and key pathogens for food safety in the final product (processing plants).

We have also recently been approaching the area of genomes and proteomics to better understand the variations present in the production chain.

The laboratory has provided strategic support to the human diagnostics area. In 2009, it was authorized to conduct assays for the human influenza pandemic H1N1. In April 2020, it was authorized to conduct diagnoses for the SARS-CoV-2 pandemic. Over 82,000 analyses were performed in 2023, which represented a significant contribution to the initial COVID-19 testing capacity for the southern-austral region and the entire Company.

COMMITTED TO COMMUNITIES

Promoting Employment and Local Development

COMMUNITY ENGAGEMENT

MAIN ENGAGEMENT ACTIONS

Commitment to Magallanes

We established an agreement to provide training to local suppliers. This has allowed us to add new businesses to our value chain. We also have offered salmon at preferential prices to Kawésgar communities and offer scholarships to Kawésgar community members.

Memorandum of Understanding between Artisinal Fishing and Salmon Producing Companies in Magallanes

This agreement is designed to increase the participation of small-scale fishermen from Magallanes in the AquaChile value chain, to jointly address various environmental challenges, and to promote training for the small-scale fishing sector.

01 02 03 04 05 06 07

ENVIRONMENTAL INITIATIVES 2022

Environmental monitoring at Lake Llanguihue

Together with Fundación Chile Lagos Limpios and in collaboration of the University of California-Davis Tahoe Environmental Center and Innovex, we submitted the first results of the Lake Llanguihue Monitoring and Modeling Program. This initiative seeks to generate environmental and scientific data in real time that presents and projects the condition of the lake and supports the design of public policies for managing the lake ecosystem.

Recycling Route: Inauguration of Recycling Center at Puerto Chacabuco

We opened a recycling center at Puerto Chacabuco as part of the Recycling Route project. The project involves providing training tools regarding how to recycle, why it is important to adopt sustainable practices, and how to do so. It also includes weekly removal of recyclable waste with proper final disposal.

CORFO Project: Development of panels using industrial waste

AquaChile, the group Cisne Verde -a recycling company that works with discarded industrial panels- and CORFO co-financed a machine to press plastic chips and manufacture construction panels out of recycled plastic. We expect to begin to sell these products soon.

Removal of hazardous waste from the Puerto Natales fishing terminal

In the context of the memorandum of understanding in place with small-scale fishermen and salmon companies in Magallanes, we managed the removal of hazardous waste from the Puerto Natales fishing terminal. We removed 2,000 liters of discarded fuel so that it could be properly disposed of. We plan to implement a hazardous waste warehouse in 2023 and to provide training on waste management for fishing terminal users.

Household Waste Management in Coyhaigue

In order to contribute to household waste management in the city, we donated fishing nets to the municipal environmental department to contain waste placed in the 65 collection hoppers in place in the city when they are ready for transport.

CONTRIBUTIONS AND DONATIONS

Dock at Isla Laitec

As a result of our ongoing work with the Isla Laitec neighborhood council, we donated the Lile sector dock. This improved the connectivity of 20 families on the island.

Water supply during dry season

We paid for a water truck to provide water to families in coastal Haulaihué.

A devastating fire impacted the population of Camilo Henríquez and Villa Los Presidentes in December 2021, destroying 120 homes. AquaChile was part of a major public-private effort through which the salmon industry's associations (the Salmon Council and SalmonChile) joined Desafío Levantemos Chile, the Los Lagos Regional Government and the Housing Ministry to finance and build 38 homes. The properties were given to the recipients in 2022, and a total of 144 people benefited from the initiative.

Help Fighting the Timaukel Fire

We sent a truck with aid from Puerto Natales to the municipality of Timaukel in Tierra del Fuego. The aid included a freezer that helped to store perishable food for the over 120 Forestry Corporation, Fire Department and Army personnel who worked to fight the fire. We also donated food products such as salmon, pork, chicken, ground beef, noodles, rice, vegetables and water.

PROMOTING LOCAL EMPLOYMENT AND DEVELOPMENT

At AguaChile, we promoting local employment and development. Ninety-one percent of our employees live in the region where they work. This is true for 56% of our suppliers.

We are a company with a strong vocation for providing regional We also support enterprise through programs for companies, support. This led us to pay over 99% of our commercial and whether or not they are part of our operations. The fact that aquaculture patents in the municipalities and regions where we our operations are located in remote regions creates a series operate.

LOCAL EMPLOYMENT

We strive to attract local talent. To this end, we design initiatives that allow us to position ourselves as an employer in the places where we operate. We have direct recruitment funds that allow us to hire the staff required to achieve operational continuity and contribute to local development.

Our hiring model is designed to ensure that employees have the skills necessary to manage challenges related to their role. We also take steps to hire local workers. We have solid procedures in place to ensure health and safety from the moment an employee is hired.

Milestones in 2022

Industrial School Program

This initial selection and training initiative is designed to allow the Company to identify talent and provide training on basic skills for new operators. In 2022, we implemented the program in 100% of our plants. Furthermore, 78% of all new operators were trained through the Industrial School Program.

Professional Internship for Liceo Monte María (Pucón)

This initiative is directed at eleventh and twelfth grade students studying aquaculture and telecommunications at the school

Planning

of related services that emerge from the local community, creating poles of enterprise.

High Season Industrial

We implemented a recruitment plan in anticipation of our high season. This allowed us to hire the workers that we need to ensure operational continuity at our industrial plants. The main actions focused on open recruitment by disseminating calls on the radio and through municipal hiring offices in each town. We hired over 3,000 people in 2022 for operator jobs in industrial plants located in the Los Lagos and Magallanes Regions.

Our Value Operators Program

This program provides tools and information on the value chain and the contribution of each employee through their role. In 2022, 527 individuals participated in this program, bringing the total number of participants to 1,010.

LOCAL DEVELOPMENT

2022 Initiatives

Plaza de Armas Tourism Totem

In an effort to contribute to the development of the municipality of Aysén through tourism, we provided a totem that was installed in the center of the city of Puerto Aysén.

Collaboration agreement with Inacap

The goal of this initiative is to strengthen technical and professional education and training of specialized human capital in the Aysén Region.

2022 Training Program

In order to contribute to training local residents, we developed a program of 19 courses in 2022. The courses reflect the contexts and needs of local residents and are meant to provide important, relevant training.

A total of 302 people were trained and 24,160 hours of training were delivered.

Support for the Codinhue Bajo Farming Cooperative

In an effort to support a project to grow 7,000 raspberry plants with the Codinhue Bajo cooperative, we donated building materials to build the perimeter for the farm.

Discarded Planks Donated for Rural Puerto Cisnes Pens

We donated discarded planks to various residents of rural areas in Puerto Cisnes. They will be used to create or improve pens for their animals.

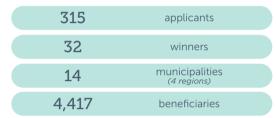

Contribution to the development of the 2022 Fried Fish Festival

The 2022 Puerto Cisnes Fried Fish Festival was held in January. We supported the Fried Fish Cultural Association, covering some of their costs. At the request of the Puerto Cisnes Chamber of Commerce and Tourism, we also donated eight trash containers to be placed along the route covered by the event.

2022 COMPETITIVE GRANTS

The Company allocates up to CLP\$1 million to fina community initiatives in the areas of sustainability the environment, inclusion, healthy living, equipment infrastructure, education, culture and local product development.

SUPPORT FOR ENTREPRENEURS

AquaChile Impulsa

This new corporate volunteer program is designed to provide support to entrepreneurs. AquaChile employees support local entrepreneurs, helping them to design a business plan that is executed with corporate funding. In 2022, 36 employees signed up to volunteer.

We offered the course "Seafood Processing and Conservation Techniques" to 14 small-scale fishing leaders from Puerto Natales. The course consists of 24 hours of training. The purpose of the initiative is to contribute to and enhance skills related to seafood packaging and conservation, allowing beneficiaries to acquire new knowledge that adds value to the products that they and their families fish.

Sponsorship of Entrepreneurship Competition

We participated in the launch of the Nothing Will Stop Us entrepreneurship competition in the municipality of Coyhaique. The initiative was organized by G100, a group of entrepreneurs that seeks to accelerate Chile's economic development. We sponsored similar events in Southern Chiloé and Aysén in 2022 as well.

RELATIONSHIP WITH INDIGENOUS PEOPLES

Some of our operations are located close to Indigenous communities. When we meet with Indigenous organizations, we ensure that we use the proper mechanisms and that they are validated by Indigenous organizations. We make sure that dialogue is conducted in good faith with traditional representatives and officials.

In order to increase community engagement, create new initiatives and bring export-quality salmon to Chileans, especially in the areas where part of the production process is developed, our Puerto Natales store is managed by a company that belongs to Kawésqar community members. This allows us to support the community and open up spaces to showcase Kawésqar culture, as we share the area with this group. They also advise us on store design processes.

Lof Cuenca del Cabedaña Budget

The participatory budget program finances social investment projects. In 2022, we invested 100% of the monies allocated in a portfolio of projects that benefited 300 families from six Mapuche communities.

Salmon Point of Sale Lof Cuenca del Cabedaña

Thanks to this point of sale, which is managed by Lof Cuenca del Cabedaña, Curarrehue residents (over 7,000 people) can access salmon at preferential prices. The profits obtained through the Income benefit the over 300 families who are part of these six Indigenous communities.

Work with the Juan Hueuñir Community

We work with this community on an ongoing basis, supporting the creation of local suppliers for Codinhue fishery activities. We held a second training program on native woodworking, supported agricultural projects and provided biostabilization materials.

Work with the Juan Meli Community

We have worked with this community since 2014. We donated seeds to 36 families, offered a workshop on native wood and built a deep well so that the local community can hold their *guillatún* religious ceremonies.

Greenhouses for the Rupu Lafquen Indigenous Community

Following a participatory process, an agreement was reached to create three polycarbonate greenhouses that will be managed by community members. AquaChile contributed the construction materials.

Scholarships for students from Hornopirén indigenous communities

In 2022, we provided school supplies and shoes to 54 children and teens.

coastal Quellón

Second Kawésqar Cultural Initiatives Showcase for AquaChile employees

We held the second showcase of cultural initiatives for employees at our Río Hollemberg salmon farm. These activities are led by It'eria, members of the local Puerto Edén community, in an effort to familiarize our teams with the Kawésqar world view.

Native Wood Workshops with Indigenous communities

The purpose of these workshops, which featured members of the Juan Hueñir Indigenous community in Vilcún and the Juan Meli community in Melipeuco, is to expand participants' knowledge of wood cutting, sanding and finishing techniques.

AquaChile 🔛

Arc welding training for the Indigenous community in

The course on basic arc welding techniques was attended by 24 people. The activity focused on presenting processes related to welding, mainly the coated electrode arc welding process. Participants also acquired basic knowledge of safety rules and the factors that influence a welding process.

Socialization of the desalination plant project with the Calbuco Indigenous community

We met with some of the leaders of the We Newen Mapu Indigenous community in Calbuco to present the proposal for a desalination plant that will allow the Pargua Transfer Center to use seawater.

EDUCATION AND ATHLETICS SUPPORT

EDUCATION

Scholarships for Kawésgar **Community Members**

We held a scholarship competition in 2022, awarding support to 49 students who are members of Kawésgar communities.

Events

We participated in the launch of two recycling campaigns at public schools in Quellón. We contributed the final disposal of the items collected (batteries and paper) by members of the Escuela Rural Yaldad and Liceo Rayen Mapu (both public schools) and donated awards for the classes that met the goal.

HEALTHY LIFESTYLES

Quellón Children's Soccer Academy

For the past 20 years, we have sponsored a soccer academy that is open to children ages five to 13.

AquaChile Scholarships for Guaitecas Students

We implemented a scholarship program for Guaitecas students in partnership with the local government. A total of 11 students received awards through the second edition of the program.

World Water Day Recycling

Starlink Satellite Internet for Schools

We brought Starlink high speed intenet to schools in Puerto Gala and Melimoyu in the municipality of Cisnes. This allowed isolated schools to access high-speed internet, which has had a positive impact on their education.

We sponsored the Curarrehue triathlon club's participation in the Pucón Ironman Competition, providing uniforms to its members.

We also sponsored young athletes from the municipality of Curarrehue.

RESPONSIBILITY TO OUR SUPPLIERS

Our Company has always prioritized local suppliers, encouraging them to participated in tender processes when we require services or purchase supplies and materials. We promote local industry and offer equal conditions for applications.

2022 HIGHLIGHTS

Supplier Perception Study

We interviewed over 300 suppliers and service providers in order to measure all key aspects of the business relationship. In 2022, we created a plan to improve key aspects of our business relationship with our suppliers. It was led by the Finance Division.

Working Group with Suppliers from Magallanes

We created a permanent working group with suppliers from the Magallanes Region focused on continuous improvement of our business relationship. In 2022, this allowed us to increase contracts for local services and the amount of money paid to suppliers in this region.

SUPPLIER ASSESSMENT

We have classified our suppliers as contractors and general services and materials suppliers.

When we evaluate possible new contractors, we analyze documents from the company's procurement area. We use the Certilap or Ksec platforms to address occupational health and safety matters when appropriate. The information gathered is stored on our support platforms to be used when the service is required. We have a set procedure for such actions that is reviewed annually to be updated and disseminated within the Company.

When we add new suppliers to the system, we ask them to provide the following:

- A signed Conflict of Interest policy
- Statement or compliance with Law No. 20.393
- Conflict of interest statement
- Statement regarding relationships with politically exposed persons

We assess contractors' compliance in the area of occupational health and safety, using legal standards set by AquaChile and Dicom (to determine whether they owe money for their employees' salary or benefits). In 2022, we assessed 188 contractors, 50 of which were rejected or eliminated.

We monitor the compliance of contractor firms with salary and benefits payments for their employees through the external supplier Certilap. In order for any payments to be authorized, the company must certify compliance with salary and benefits obligations. If there is no evidence of legal compliance, the payment is held until such certification is provided.

We also review compliance with occupational safety requirements on a monthly basis, including internal regulations, the provision of personal protective equipment and the right to know.

2022 HIGHLIGHTS

Multidisciplinary Visit to Magallanes

We visited suppliers and future suppliers and trained them on the application process. We provided instructions regarding the minimum required tion for initiating the process. We also for suppliers. This allowed us to certify cation in 2022. over 20 people and over 10 companies.

Occupational Health and Safety and Labor Certification Training for Service Provision Companies

We offered labor and occupational health and safety training in the Aysén Region documentation and contact informa- on the Certilap platform and occupational health and safety documentation. provided additional training on the We also made improvements in occupa-Certilap platform and its help channels tional health and safety and labor certifi-

Community Training in Aysén

We trained future suppliers from the Aysén community, explaining the complete flow of the assessment process. This allowed us to improve the community supplier assessment application.

SUPPLIER PAYMENTS

Our supplier payment policy focuses on issuing paym within 30 days. In order to achieve this goal, we plan purchasing processes and complete them in advance, gi supplier companies certainty through purchase orders.

We use an automated, impartial, objective and fair valida accounting and payment process.

> AquaChile was chosen the best SME supplier payer in the salmon industry according to the most recent ranking developed by the Chilean Entrepreneurship Association (Asociación de Emprendedores de Chile, ASECH) Commodities Exchange.

Main payment indicators and supplier payment time frame

| Payment period range (calendar days) | No. of invoices approved for payment | No. of invoices paid | Total amount (MMUS\$) | Total interest paid due to delay in invoice payment | Number of suppliers |
|---|--|----------------------|--------------------------|---|---------------------|
| Domestic suppliers | | | | | |
| Under 30 days | 103,915 | 85,432 | 810 | 0 | 2,032 |
| Between 31 and 60 days | 4,358 | 15,624 | 270 | 0 | 909 |

SUPPLIER SATISFACTION STUDY

COMMITMENT TO AND **RELATIONSHIPS WITH SUPPLIERS**

Our suppliers play a fundamental role in the development and achievement of our goals. To that end, we have included individuals and companies that share our standards, integrity rules and sustainable production model in the various stages of the value chain. We prioritize making commitments to local suppliers and contributing the the economy of the communities where we operate.

SAP Ariba project

SAP Ariba Sourcing is the implementation of an SAP module and website that supports the purchasing process, allowing us to contact our suppliers easily regarding tenders, bids, comparisons of offers, adjudication and the creation of the purchase order or framework agreement. This initiative is designed to standardize, streamline and digitize the purchasing process.

Workshop in Magallanes

This activity is part of our work related our commitment to promote the development of local suppliers in Magallanes, creating initiatives to improve and strengthen their work. To this end, we hold a theoretical and practical training workshop focused on improving skills and capacities with respect to the information that the service provides with beach cleanups and accurate identification, segregation and classification of waste in order to create higher quality reports to be submitted to the appropriate authorities.

STAKEHOLDER AND MEDIA **RELATIONS**

Our Communications and Corporate Reputation Division allows us to maintain an ongoing relationship with stakeholders, especially the media and members of the press interested in learning about the company's position on matters that fall under its purview. We also publish a monthly report to monitor data and indicators on press coverage and social media interactions. It also contains information on internal communications. Monthly meetings are also held to review the contents for each communication channel used by the company.

Our Investor Relations team is comprised of staff who address Chilean and international shareholder and investor concerns and clarify questions about the Company, its main activities, risks, financial, economic or legal situation and publicly known business activities. Our website www.aquachile.com offers information about the Company that must be provided to shareholders and the general public under current law. A link to the email address investor.relations@aquachile.com is highlighted so that investors can contact staff directly and in a timely manner to express concerns, which are addressed as quickly as possible.

05 CARING FOR OUR BLUE ECOSYSTEM

- We Protect Our Environment
- Aware of Climate Change
- Circular Economy

WE PROTECT OUR **ENVIRONMENT**

CARING FOR THE WATER

Water is the main natural resource that we use in our production processes. We are especially concerned about caring for it and using it efficiently.

In this context, salmon farms have the appropriate water use rights, which are granted by the General Water Directorate (DGA).

At AquaChile, we respect both maximum extraction values and authorized uses, as well as the ecological values that allow us to have a minimal impact on the environment. As such, all of the water we use in the production process on land is treated and returned to the source in accordance with applicable regulations.

We also have open flow salmon farms and recirculation centers. We check each unit daily through periodic maintenance of the water treatment system (influent and effluent).

Feed plant water is included in the legal matrix to identify related requirements and in the matrix of environmental aspects and impacts to assess real or potential impacts.

The water that enters the plant is measured every six months in compliance with NCh409 (including water used for production and hygienic services) and water that is released must comply with DS46.

Water management at processing plants is focused on minimizing the use of fresh water from underground wells.

It is important to note that the fresh water and sea water used is turned into drinking water through chlorination and that water is not reused.

We have implemented activated sludge and dissolved air flotation (DAF) treatment processes. We reuse water for our processes in order to conserve ecosystems and hydrological processes, determine the supply and availability of water for its optimization, recover and protect the quality of water resources and monitor pollutants.

Water Efficiency in Industrial Plants

We set a goal for 2022 of maintaining or decreasing the water efficiency recorded in 2021 in our processing plants. We met that goal in 100% of the plants.

Automated Valve Opening

We incorporated sensors for automated valve opening. This process is 100% complete at the Quellón Plant.

Installation of a Pressure Cleaning System at the Plant

The implementation of a pressure cleaning system for water used in cleaning processes allowed us to reduce water use by 75%.

Recirculation of Fresh Water Using Vacuum Pumps

This project is underway at the Calbuco Plant.

WATER TREATMENT

We focus on regulatory compliance in the area of water treatment. We measure parameters and monitor water use and discharge indicators based on volumes of water, liquid industrial waste and their relationship to the biomass processed to verify that they are within the limits set out in current regulations and to mitigate water-related risks.

INTERACTION WITH WATER

Interactions with water - Industrial

| | actions water | Details (method and source) | Impacts | Management strategy or focus areas | | |

Program to improve liquid industrial waste channeling and treatment

Maintenance of and improvements to the liquid industrial waste channeling and treatment system, which allows us to quantify liquid industrial waste correctly.

07

Addressing impacts related to water

In order to identify impacts and risks related to water in the industrial area, we have developed matrices on environmental impact and appearance for water treatment. We have a monthly calendar for cleaning the liquid industrial waste plant and sampling. We have contracts with accredited laboratories, which are responsible for the sampling. We implement environmental surveillance programs twice per year and conduct monthly monitoring based on our commitments.

ODOR EMISSIONS

The feed plant has a bio filter that can reduce the odors generated by the process by 95%. This allows us to operate without being a significant source of odors for the community.

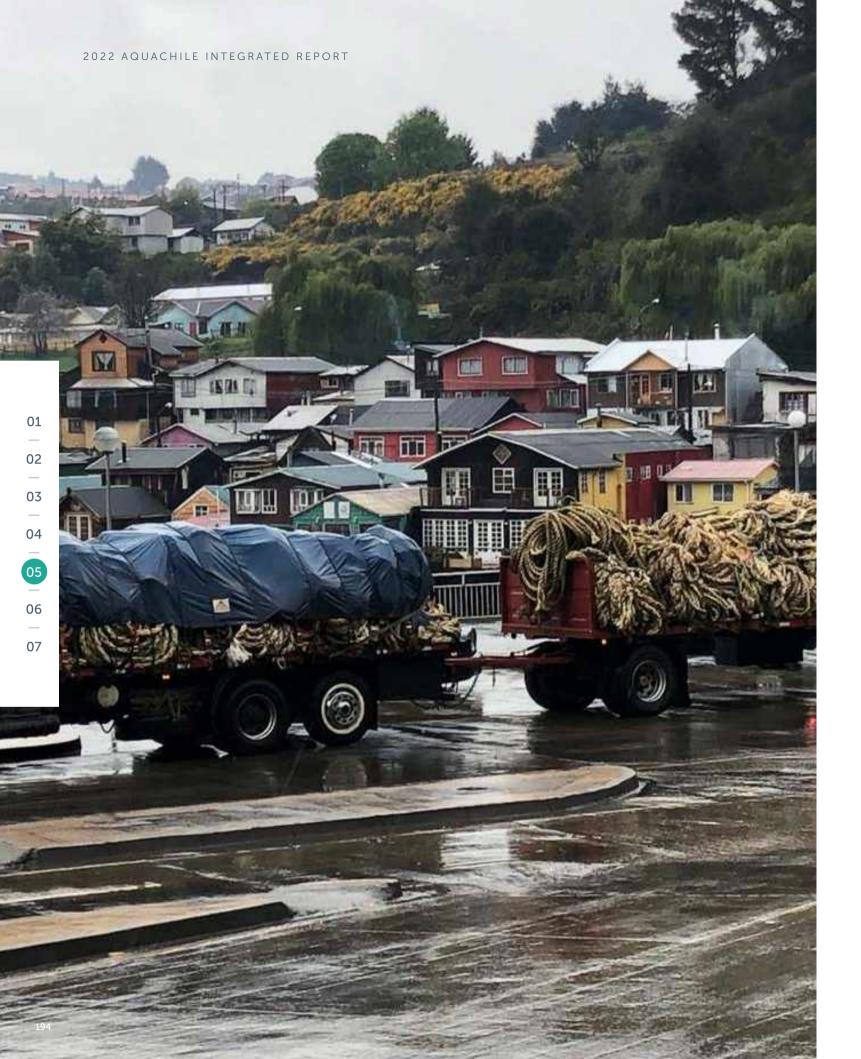

NOISE EMISSIONS

In an effort to mitigate noise from the feed plant's third production line, we built an acoustic screen in 2022 that allows us to meet legal noise level restrictions.

01

CIRCULAR **ECONOMY**

WASTE MANAGEMENT

In 2022, some 23,177 m³ in waste was removed from our centers. It was comprised of plastic waste (20.5%), metallic waste (33.5%), household-industrial waste (45%) and hazardous waste (1%). We recycled 35% of this by reusing it internally, selling it or sending it to a recycling plant.

Reuse of boiler slag

In 2022, we reused 100% of the slag generated as boiler combustion residue at the feed plant to be used for composting. We composed 1,024,660 kg of slag that year.

Atando Cabos and **Ecofibras Project**

We have been working with the company Atando Cabos to recover ropes, allowing us to decrease the waste sent to landfills. These are reused to make pallets, boxes and other objects.

Decrease in the amount of organic cafeteria waste

We are sending organic cafeteria waste to the company Regenera Orgánicos, which makes compost to be used as fertilizer.

2021.

the plant.

Bench project for staff in parking lot using recycled plant material

material.

of non-hazardous waste was recycled, recovered or reused in 2022.

Ecofibras recycling management

This company has provided comprehensive waste management services to the Calbuco and Cardonal plants since February 2022. This allowed us to increase the percentage of waste sent to be recycled compared to

The Quellón plant and Ecofibers are launching a pilot project to manufacture plastic pallets using waste recycled from

In an effort to decrease the amount of plastic sent to the landfill, we have sent clean plastic to the company Wood Good since April 2022. They turned it into benches that were installed in the plant parking lot. 4,410 kilos were used as raw 94,489

tons of waste were recycled or recovered.

Progress towards 2022 goals

In order to manage impacts related to waste generation, we made an environmental declaration on waste and the amounts produced within the production model, measuring the environmental impact for the entire production chain. This methodology allows us to identify and design corrective measures and strategies for the appropriate handling and final disposal of waste. We achieved this by recycling surplus supplies, maintaining contracts with companies responsible for recycling and recovering organic and inorganic waste.

The comprehensive environmental policy sets out targets for waste management, recycling and contributing to the circular economy.

Each industrial plant has certifications related to environmental management such as GlobalGap and BAP. The Quellón Plant also has ISO 14001 Certification.

In 2022, we set specific goals for promoting more recycling. The Quellón, Calbuco and Cardonal plants began to work on a project with Ecofibras to segregate all plastic and send it to be recycled.

We also work with suppliers that help with cardboard and polystyrene recycling.

Significant impacts -potential and real- related to waste

Industrial

| LAND AND WATER ENVIRONMENT | |
|----------------------------|--|
| POLLUTION | |

Industrial

Plastic bags, aprons, plastic pallets and straps generated by salmon production in the cleaning, processing, packaging and storage areas.

Potential impact

LAND AND WATER ENVIRONMENT POLLUTION

Cardboard, insulation and paper generated by salmon production in the cleaning, processing, packaging and storage areas.

Potential impact

WATER ENVIRONMENT POLLUTION. Industrial

Liquid industrial waste and sludge generated by production processes that involve water consumption and housing fish in a land collection facility.

Potential impact

Actions taken to prevent waste generation in own activities

Decrease of waste disposed of in landfills

Proyecto Atando Cabos and Ecofibras Project reuse ropes to make pallets, boxes and other objects.

07

Recovery of boiler slag

Recovery of boiler slag proven through final disposition certificates, addressee resolution and transportation.

Liquid waste composting

Composting of liquid waste is proven through final disposition certificates, addressee resolution and transportation.

Organic waste from the cafeteria is sent to Regenera Organicos.

Composting is performed at the composting plant located in Línea Nueva, Puerto Varas. The plant holds Sanitary Resolution No. 14253, which certifies us as the authorized final recipient of organic waste. Transportation was completed in accordance with Sanitary Resolution No. 2153, which certifies the entity as a transporter of organic waste.

Shipment of cardboard from the packaging and warehousing process to SOREPA

Paper and cardboard are sent to SOREPA Spa., a company that recovers paper. All of the waste listed in it have as their destination and final disposal reprocessing in cardboard and paper manufacturing company facilities.

PACKAGING

In regard to sustainable and recyclable packaging, we have quality and safety certifications that involve environmental management and sustainable production plans (ISO 14001, BAP, Global GAP). We also have contracts in place with recycling companies and firms that can recover organic and inorganic waste.

We are constantly seeking out and incorporating sustainable and/or higher tech alternatives to the packaging materials that we use through documentary, regulatory and performance validation in the various plants.

Verlasso: Fresh salmon in recyclable cardboard

We developed and launched a cardboard box to replace polystyrene packaging for our ultra premium refrigerated and frozen Verlasso salmon. This was implemented in April 2022, and we are developing other formats with other suppliers.

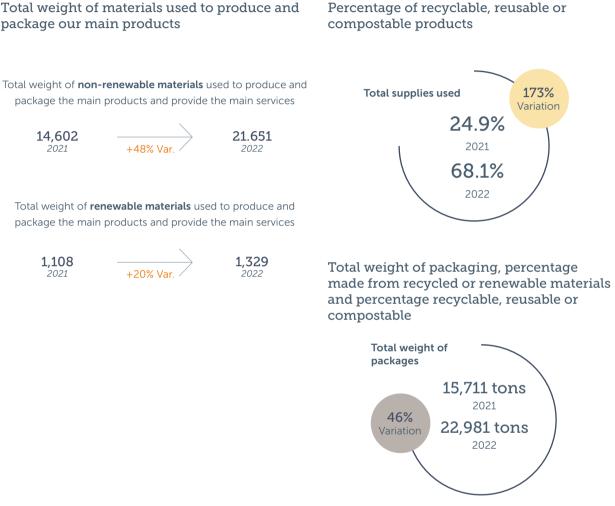

Non-recyclable Pasos Verdes materials

We are developing an initiative to identify alternatives to hard-to-recycle materials such as thinner vacuum film or those that point to monomateriality.

Non-biodegradable Pasos Verdes materials

We are looking for compostable or biodegradable materials to use instead of materials that are recyclable, such as those made of high or low density polyethylene. Project under development.

Total weight of materials used to produce and package our main products

package the main products and provide the main services

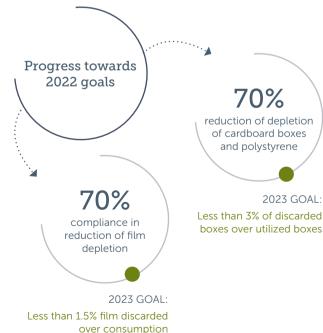

01

Reduction of the environmental effect of packaging throughout its life cycle

Consumers often are not aware that they can recycle materials used for palletizing, straps, labels, interior and exterior covers, and individual bags.

The Sales, Industrial and Acquisitions Division is promoting an initiative to mitigate this for the most recyclable packaging and wrapping (in the case of VP films) using lower weight and lower volume materials (bag thickness, pad thickness and weight, etc.) and introducing biodegradable or compostable packaging. We have found that it is not enough for materials to be recyclable, because the entire responsibility for their final disposal falls to the client or final consumer.

Percentage of products with packaging that has sustainable attributes packaged this year

MANAGEMENT

MATERIAL **EVENTS**

1. Notice of Ordinary Shareholders' Meeting

March 29, 2022

Board agreement to invite shareholders to a regular meeting to address the topics generally addressed during this type of gathering.

2. Sale of investment in Costa Rica

March 31, 2022

All of the shares of the affiliate GRUPO ACI S.A. and its subsidiaries, companies located in Costa Rica and focused on the production and sale of tilapia, were sold to the company AQUAFOODS GROUP S.A., a subsidiary of Industrias Martec, which was founded in Puntarenas Province, Quepos, Costa Rica. The final price paid for the transaction and transfer of the shares was US\$ 6 million. This transaction resulted in a total loss of US\$ 36.389.000.

3. Ordinary Shareholders' Meeting

April 18, 2022

An ordinary shareholders' meeting called by the Board was held and the main agreements were adopted.

CORPORATE **PURPOSE**

Name or corporate name: Empresas Aquachile S.A.

Chilean Taxpayer ID Number: 86.247.400-7

Entity type: Publicly listed corporation

Securities Registry No. 1069 dated April 12, 2011

Legal Address: Cardonal s/n Lote B, Puerto Montt, Región de los Lagos, Chile

Organization:

The Company is domiciled in the city of Puerto Montt, though it has or may have agencies, offices or branches elsewhere in Chile and abroad. The structure of the Company consists exclusively of a General Management entity headquartered in Puerto Montt.

CORPORATE PURPOSE

The purpose of the Group is to import, export, manufacture, produce, farm, fatten, process, modify and sell hydrobiological species, especially salmonids, in Chile and abroad.

CONTROLLING SHAREHOLDERS

The Company is controlled by the company Agrosuper S.A., which has 99% direct interest in the ownership. It is in turn controlled by Mr. Gonzalo Vial Vial, ID Number 3.806.024-4, and by his children, Ms. María Cristina Vial Concha, ID Number 7.032.945-K, Ms. María of the Pilar Vial Concha, ID Number 7.022.795-2, Ms. María José Vial Concha, ID Number 7.022.776-2 and Mr. Gonzalo Vial Concha, ID Number 7.022.663-4, through their indirect interest in the Company. The aforementioned individuals participate indirectly in AquaChile Companies through their interest in Agrosuper S.A. through the companies Sociedad Agrocomercial El Paso S.A., Promotora Doñihue Ltda., Agrícola GV S.A. and Inversiones VC Ltda. They are directly and indirectly holders of 100% of the shares and of the social rights of the aforementioned companies.

ABOUT THIS

IMPACT AND MATERIALITY MATRIX

Our 2022 Integrated Report presents the challenges and results on sustainability issues for the period between January 1 and December 31, 2022. This document was developed in accordance with the standard version of the Global Reporting Initiative (GRI).

The materiality process seeks to identify key issues for an organization's stakeholders, including the main economic,

environmental and social impacts of the company that influence these groups' decisions.

In order to identify material aspects, important economic, environmental and/or social impacts are considered as well as the interests and expectations of internal and external stakeholders, relevant topics in the area of sustainability for the sector and the industry and the organization's fundamental values, policies, strategies, goals and purposes.

The sources of the materiality were the following:

2022 MATERIAL ISSUES

| Material Issue | Stakeholders | ESG |
|---|-------------------------|----------------|
| Economic performance: Profitability, sales strategy, price context, growth and new markets | Governance | ECONOMIC |

SASB INDEX DISCLOSURE OF ISSUES ON SUSTAINABILITY AND FINANCIAL GUIDELINES

| TOPIC | CODE | ACTIVITY METRIC | CATEGORY | UNIT OF MEASURE | PAGE | COMMENTS |
|-------------------------------------|--------------|---|----------------------------|---|---------|--|
| GENERAL INDICATORS | FB-MP-000.A | Number of processing and manufacturing facilities | Quantitative | Number | - | 160 |
| GENERAL INDICATORS | FB-MP-000.B | Animal protein production, by category | Quantitative | Tons of animal production | 3 | 230,205 |
| GENERAL INDICATORS | FB-MP-000.B | Percentage of outsourced animal protein production, by category | Quantitative | Percentage (%) | - | 6% |
| | | | | | | |
| TOPIC | CODE | ACCOUNTING METRIC | CATEGORY | UNIT OF MEASURE | PAGE | COMMENTS |
| Greenhouse gas emissions | FB-MP-110a.1 | Global gross scope 1 emissions | Quantitative | Metric tons (t) of CO_2e . | 190 | 56,097 |
| Greenhouse gas emissions | FB-MP-110a.2 | Discussion of long-term and short-term strategy or plan to manage Scope 1 emissions, emissions reduction targets, and an | Discussion and analysis | N/A | 190-192 | |
| | | analysis of performance against those targets | 5 | | | |
| Energy Management | FB-MP-130a.1 | (1) Total energy consumption | Quantitative | Gigajoules (GJ) | 186 | 1,383,467 |
| Energy Management | FB-MP-130a.1 | (2) Percentage of consumed grid electricity | Quantitative | Percentage (%) | 187 | 98.34% |
| Energy Management | FB-MP-130a.1 | (3) Percentage of consumed renewable energy | Quantitative | Percentage (%) | 186 | 49.20% |
| Water Management | FB-MP-140a.1 | (1) Total water withdrawn | Quantitative | Thousand cubic meters (m ³) | 180 | 57.2 |
| Water Management | FB-MP-140a.1 | (2) Total water consumed | Quantitative | Thousand cubic meters (m ³) | 182 | 34.1 |
| Water Management | FB-MP-140a.1 | (3) percentage of water withdrawn in regions with high or extremely high baseline water stress | Quantitative | Percentage (%) | 180 | 4.0% |
| Water Management | FB-MP-140a.1 | (4) percentage of water consumed in regions with high or extremely high baseline water stress | Quantitative | Percentage (%) | 182 | 7.9% |
| Water Management | FB-MP-140a.2 | Description of water management risks and analysis of strategies and practices to mitigate those risks | Discussion and analysis | N/A | 178-180 | |
| Water Management | FB-MP-140a.3 | Number of incidents of noncompliance with water quality permits, standards, and regulations | Quantitative | Number | 180 | 0 |
| Land Use and Ecological Impacts | FB-MP-160a.1 | Amount of generated manure and animal waste managed according to a nutrient management plan | Quantitative | Metric tons (t) | - | No manure and/or animal waste management programs are carried out according to a nutrient management plan. |
| Land Use and Ecological Impacts | FB-MP-160a.1 | Percentage of generated manure and animal waste managed according to a nutrient management plan | Quantitative | Percentage (%) | - | No manure and/or animal waste management programs are carried out according to a nutrient management plan. |
| Land Use and Ecological Impacts | FB-MP-160a.2 | Percentage of pasture and grazing land managed according to Natural Resources Conservation Service (NRCS) conservation plan criteria | Quantitative | Percentage (%) per hectare | - | Does not apply due to nature of the business |
| Land Use and Ecological Impacts | FB-MP-160a.3 | Animal protein production from concentrated animal feeding operations (CAFOs) | Quantitative | Metric tons (t) | - | Does not apply due to nature of the business |
| Food Safety | FB-MP-250a.1 | (1) Global Food Safety Initiative (GFSI) audit: non-conformance rate corresponds to major non-conformance cases | Quantitative | Rate | 226 | 4.5 |
| Food Safety | FB-MP-250a.1 | (2) Global Food Safety Initiative (GFSI) audit: non-conformance rate corresponds to minor non-conformance cases | Quantitative | Rate | 226 | 6.3 |
| Food Safety | FB-MP-250a.1 | (3) Global Food Safety Initiative (GFSI) audit: associated corrective action rate corresponds to major non-conformance cases | Quantitative | Rate | 226 | 1.0 |
| Food Safety | FB-MP-250a.1 | (4) Global Food Safety Initiative (GFSI) audit: associated corrective action rate corresponds to minor non-conformance cases | Quantitative | Rate | 226 | 1.0 |
| Food Safety | FB-MP-250a.2 | Percentage of supplier facilities certified to a Global Food Safety Initiative (GFSI) food safety certification program | Quantitative | Percentage (%) | - | Does not apply due to nature of the business |
| Food Safety | FB-MP-250a.3 | (1) Number of recalls issued | Quantitative | Number, Metric tons (t) | 137 | 0 |
| Food Safety | FB-MP-250a.3 | (2) total weight of products recalled | Quantitative | Number, Metric tons (t) | 137 | 0 |
| Food Safety | FB-MP-250a.4 | Discussion of markets that ban imports of the organization's products | Discussion and analysis | N/A | - | There are no markets in which we operate that prohibit the sale of our products. |
| Antibiotic use in animal production | FB-MP-260a.1 | (1) Percentage of animal production that received medically important antibiotics Atlantic salmon | Quantitative | Percentage (%) by weight | - | 0% |
| Antibiotic use in animal production | FB-MP-260a.1 | (1) Percentage of animal production that received medically important antibiotics: Pacific salmon | Quantitative | Percentage (%) by weight | - | 0% |
| | | | | | | |

| TOPIC | CODE | ACCOUNTING METRIC | CATEGORY | UNIT OF MEASURE | PAGE | COMMENTS |
|---|--------------|---|-------------------------|----------------------------------|------|--|
| Antibiotic use in animal production | FB-MP-260a.1 | (2) Percentage of animal production that received not medically important antibiotics Atlantic salmon | Quantitative | Percentage (%) by weight | - | 75.3% |
| Antibiotic use in animal production | FB-MP-260a.1 | (2) Percentage of animal production that received not medically important antibiotics: Pacific salmon | Quantitative | Percentage (%) by weight | - | 50.9% |
| Workforce health & safety | FB-MP-320a.1 | (1) Total recordable incident rate (TRIR) | Quantitative | Rate | - | 1.37 |
| Workforce health & safety | FB-MP-320a.1 | (2) fatality rate | Quantitative | Rate | - | 0.0% |
| Workforce health & safety | FB-MP-320a.2 | Description of activities to assess, monitor, and mitigate acute and chronic respiratory health conditions | Discussion and analysis | N/A | 73 | |
| Animal Care and Welfare | FB-MP-410a.1 | Percentage of pork produced without the use of gestation crates | Quantitative | Percentage (%) by weight | - | Does not apply due to nature of the business |
| Animal Care and Welfare | FB-MP-410a.2 | Percentage of cage-free egg sales | Quantitative | Percentage (%) | - | Does not apply due to nature of the business |
| Animal Care and Welfare | FB-MP-410a.3 | Percentage of production certified by a third party animal welfare standard: Atlantic Salmon - BAP | Quantitative | Percentage (%) by weight | 131 | 98.9% |
| Animal Care and Welfare | FB-MP-410a.3 | Percentage of production certified by a third party animal welfare standard: Atlantic Salmon - ASC | Quantitative | Percentage (%) by weight | 131 | 52.3% |
| Animal Care and Welfare | FB-MP-410a.3 | Percentage of production certified by a third party animal welfare standard: Atlantic Salmon – Global GAP | Quantitative | Percentage (%) by weight | 131 | 100.0% |
| Animal Care and Welfare | FB-MP-410a.3 | Percentage of production certified by a third party animal welfare standard: Atlantic Salmon - PROA | Quantitative | Percentage (%) by weight | 131 | 17.5% |
| Animal Care and Welfare | FB-MP-410a.3 | Percentage of production certified by a third party animal welfare standard: Pacific Salmon – BAP | Quantitative | Percentage (%) by weight | 131 | 100.0% |
| Animal Care and Welfare | FB-MP-410a.3 | Percentage of production certified by a third party animal welfare standard: Pacific Salmon – ASC | Quantitative | Percentage (%) by weight | 131 | 91.7% |
| Animal Care and Welfare | FB-MP-410a.3 | Percentage of production certified by a third party animal welfare standard: Pacific Salmon – Global GAP | Quantitative | Percentage (%) by weight | 131 | 100.0% |
| Animal Care and Welfare | FB-MP-410a.3 | Percentage of production certified by a third party animal welfare standard: Pacific Salmon – PROA | Quantitative | Percentage (%) by weight | 131 | 53.9% |
| Environmental & Social Impacts of Animal Supply Chain | FB-MP-430a.1 | Percentage of livestock from suppliers implementing the Natural Resources Conservation Service (NRCS) conservation plan criteria or the equivalent | Quantitative | Percentage (%) by weight | - | Does not apply due to nature of the business |
| Environmental & Social Impacts of Animal Supply Chain | FB-MP-430a.2 | Percentage of supplier and contract production facilities verified to meet animal welfare standards | Quantitative | Percentage (%) | - | Does not apply due to nature of the business |
| Feed and animal procurement | FB-MP-440a.1 | Percentage of animal feed sourced from regions with high or extremely high baseline water stress | Quantitative | Percentage (%) by weight | - | 0.0% |
| Feed and animal procurement | FB-MP-440a.2 | Percentage of contracts with producers located in regions with high or extremely high baseline water stress | Quantitative | Percentage (%) by contract value | - | Does not apply due to nature of the business |
| Feed and animal procurement | FB-MP-440a.3 | Discussion of strategy to manage opportunities and risks to feed sourcing and livestock supply presented by climate change | Discussion and analysis | N/A | - | Does not apply due to nature of the business |
| | | | | | | |

STATEMENT OF RESPONSIBILITY

The Directors and the Chief Executive Officer of AquaChile S.A., who have signed this sworn statement, are liable for the authenticity of all information included in this Integrated Report.

Canio Corbo Lioi 3.712.353-6 Director

hini k.O

María José Vial Concha 7.022.776-2 Director

Verónica Edwards Guzmán 7.051.999-2 Director

Gonzalo Vial Vial 3.806.024-4 Director

marchele

María Del Pilar Vial Concha 7.022.695-2 Director

Andrés Vial Sánchez 6.004.844-4 Director

Juan Claro González 5.663.828-8 Director

Antonio Tuset Jorratt 4.566.169-5 Director

Fernando Barros Tocornal 6.379.075-3 Director
